# Table of Contents

<b>Preface</b> . . . . .	xi
<b>Chapter 1. Industrial Challenges Where Computational Welding Mechanics Becomes an Engineering Tool</b> . . . . .	1
Vincent ROBIN	
1.1. Reducing the risk of weld cracking . . . . .	2
1.1.1. Implant test modeling for risk of cold cracking assessment during welding operations . . . . .	2
1.1.2. PWHT and temper bead processes . . . . .	18
1.1.3. Validation of residual stress prediction on a temper bead mock-up . . . . .	24
1.2. Welding and distortion issues . . . . .	29
1.2.1. Local shrinkage prediction . . . . .	29
1.2.2. Global distortions . . . . .	37
1.3. Integrity assessment of welded structures . . . . .	44
1.3.1. DMW junction . . . . .	44
1.3.2. Ductile tearing prediction in welds considering hydrogen embrittlement . . . . .	53
1.4. Bibliography . . . . .	69
<b>Chapter 2. Laser and Electron Beam Welding of 6xxx Series Aluminum Alloys – On Some Thermal, Mechanical and Metallurgical Aspects</b> . . . . .	75
Daniel NÉLIAS, Muhammad ZAIN-UL-ABDEIN and Daniel MAISONNETTE	
2.1. Introduction. . . . .	75
2.2. Literature review. . . . .	76
2.2.1. Modeling and simulation of welding – a historical perspective. . .	76
2.2.2. Thermometallomechanical modeling . . . . .	77

2.2.3. Material properties . . . . .	88
2.2.4. Heat source modeling and boundary conditions . . . . .	90
2.2.5. Welding consequences . . . . .	93
2.3. Laser beam welding of AA 6056-T4 plates . . . . .	94
2.3.1. Research title . . . . .	94
2.3.2. Problem statement . . . . .	94
2.3.3. Strategy . . . . .	94
2.3.4. Experimental work . . . . .	94
2.3.5. Numerical simulation . . . . .	98
2.3.6. Results and discussion . . . . .	101
2.3.7. Special cases . . . . .	114
2.3.8. Conclusions . . . . .	119
2.4. Electron beam welding of AA 6061-T6 plates . . . . .	120
2.4.1. Research title . . . . .	120
2.4.2. Problem statement . . . . .	120
2.4.3. Strategy . . . . .	121
2.4.4. Numerical simulation – heat transfer analysis of EBW . . . . .	121
2.4.5. Thermomechanical characterization . . . . .	123
2.4.6. Metallurgy of aluminum alloys . . . . .	127
2.4.7. Findings of thermomechanical characterization . . . . .	131
2.4.8. Special cases . . . . .	133
2.4.9. Phenomenological model . . . . .	136
2.4.10. Conclusions . . . . .	146
2.5. Bibliography . . . . .	147
<b>Chapter 3. Finite Element Modeling of Friction Stir Welding . . . . .</b>	<b>155</b>
Eric FEULVARCH, Jean-Christophe ROUX and Jean-Michel BERGHEAU	
3.1. Introduction . . . . .	155
3.2. Overview . . . . .	156
3.2.1. Process description . . . . .	156
3.2.2. Material aspects . . . . .	158
3.2.3. Numerical modeling . . . . .	162
3.3. Physical modeling . . . . .	163
3.3.1. Material flow . . . . .	164
3.3.2. Heat transfer . . . . .	166
3.3.3. Integration of the material’s history . . . . .	169
3.4. Numerical simulation of thermomechanical couplings . . . . .	170
3.4.1. Discretization and weak formulation . . . . .	170
3.4.2. Solving the coupled problem . . . . .	172

3.5. Applications . . . . .	173
3.5.1. Simulation for tools with axisymmetric geometry. . . . .	173
3.5.2. Pins with complex geometry: a moving mesh strategy . . . . .	178
3.6. Bibliography . . . . .	184

**Chapter 4. Material Removal Processes by Cutting and Abrasion: Numerical Methodologies, Present Results and Insights . . . . .** 187  
Hédi HAMDÍ, Frédéric VALIORGUE and Tarek MABROUKI

4.1. Introduction. . . . .	187
4.2. Methodologies for the cutting process study . . . . .	189
4.2.1. Cutting analytic formulations. . . . .	189
4.2.2. Cutting numerical models . . . . .	191
4.2.3. Results and discussion . . . . .	207
4.3. Methodologies for the study of process affectations. . . . .	211
4.3.1. Modeling approach . . . . .	212
4.3.2. Abrasive process . . . . .	215
4.3.3. 3D turning . . . . .	230
4.4. Bibliography . . . . .	239

**Chapter 5. Finite Element Approach to the Sintering Process at the Grain Scale . . . . .** 247  
Julien BRUCHON and Daniel PINO MUÑOZ

5.1. A description of the sintering process at the grain scale. . . . .	247
5.2. Continuum thermodynamics framework for lattice diffusion . . . . .	250
5.2.1. Force balance . . . . .	251
5.2.2. Balance of energy and imbalance of entropy. . . . .	252
5.2.3. Imbalance of free energy . . . . .	253
5.2.4. Constitutive laws for atom–vacancy binary mixture . . . . .	254
5.3. Modeling diffusion phenomena in a simulation of the sintering process. . . . .	258
5.3.1. Volume diffusion . . . . .	259
5.3.2. Surface diffusion . . . . .	261
5.3.3. Grain boundary diffusion . . . . .	263
5.4. A level-set framework . . . . .	263
5.4.1. Standard level-set method . . . . .	265
5.4.2. A filtered level-set method . . . . .	268
5.4.3. Numerical strategy for interface capturing . . . . .	269
5.5. Sintering by surface diffusion . . . . .	272
5.5.1. Level-set formulation of surface diffusion . . . . .	272
5.5.2. Mixed $\kappa/\text{Cs}$ $\Delta s$ $\kappa$ formulation . . . . .	273
5.5.3. Time-stepping strategy. . . . .	275
5.5.4. Sintering between two grains . . . . .	275

5.6. Sintering by volume diffusion . . . . .	279
5.6.1. Mechanical problem: elastic solid – low viscous fluid coupling . . . . .	280
5.6.2. Numerical strategy . . . . .	283
5.6.3. Volume diffusion velocity. . . . .	287
5.6.4. Time-stepping strategy. . . . .	288
5.6.5. Sintering between two grains . . . . .	288
5.7. Toward a full sintering simulation . . . . .	291
5.7.1. Grain boundary diffusion . . . . .	292
5.7.2. Coupling surface and volume diffusion routes. . . . .	293
5.7.3. Sintering between two grains . . . . .	293
5.7.4. Sintering of a granular packing. . . . .	295
5.8. Conclusion . . . . .	298
5.9. Bibliography . . . . .	300
<b>Chapter 6. Scratch-Based Residual Stress Field by Scratch-Based Surface Mechanical Treatments (Superfinishing, Polishing and Roller Burnishing)</b> . . . . .	305
Guillaume KERMOUCHE	
6.1. Introduction. . . . .	305
6.2. Numerical investigation of the scratch-induced residual stress field . . . . .	307
6.3. Application to the roller burnishing process. . . . .	309
6.4. Application to the belt finishing process. . . . .	311
6.5. Application to the abrasive flow machining process. . . . .	314
6.6. Toward the extension to oblique impacts and shot peening? . . . . .	315
6.7. Conclusions. . . . .	317
6.8. Acknowledgments. . . . .	318
6.9. Bibliography . . . . .	318
<b>Chapter 7. Simulation of the Cold Spray Deposition Process for Aluminum and Copper using Lagrangian, ALE and CEL Methods.</b> . . . .	321
Daniel NÉLIAS, Jing XIE, Hélène WALTER-LE BERRE, Yuji ICHIKAWA and Kazuhiro OGAWA	
7.1. Introduction. . . . .	321
7.2. Numerical model . . . . .	323
7.2.1. Material model . . . . .	323
7.2.2. Simulation outline . . . . .	325
7.3. Results and discussion . . . . .	327
7.3.1. Evaluation of numerical methods . . . . .	327
7.3.2. Impact velocity . . . . .	337
7.3.3. Initial temperature . . . . .	339
7.3.4. Contact angle . . . . .	343

7.4. Multiple impacts . . . . .	348
7.5. Conclusion . . . . .	354
7.6. Bibliography . . . . .	355
<b>Chapter 8. Fluid/Solid/Porous Multiphysics Couplings for Modeling Infusion-Based Processing of Polymer Composites . . . . .</b>	<b>359</b>
Sylvain DRAPIER	
8.1. Composite materials and associated manufacturing processes . . . . .	359
8.1.1. Structural composite materials . . . . .	360
8.1.2. Processes . . . . .	368
8.1.3. Conclusion . . . . .	373
8.2. Modeling infusion: state of the art . . . . .	373
8.2.1. Introduction . . . . .	373
8.2.2. Difficulties and interests of the modeling approach . . . . .	374
8.2.3. Literature review . . . . .	375
8.2.4. Conclusion . . . . .	381
8.3. Mechanistic framework for modeling infusion-based processes LRI/RFI . . . . .	382
8.3.1. Model overview . . . . .	383
8.3.2. Compaction and infusion stage: mechanical modeling . . . . .	384
8.3.3. Curing stage: thermochemical modeling . . . . .	395
8.3.4. Model synthesis . . . . .	396
8.4. Mathematical formulation and numerical strategies . . . . .	397
8.4.1. Modeling flow inside and outside preforms – Stokes and Darcy . .	397
8.4.2. Strategies for Darcy/Stokes transient flows couplings – monolithic versus decoupled approach . . . . .	407
8.4.3. Synthesis . . . . .	414
8.5. Examples of infusion-based processes simulation . . . . .	415
8.5.1. Vacuum bag RTM of a T-shape . . . . .	416
8.5.2. LRI-like process simulation . . . . .	417
8.5.3. RFI-like process simulation . . . . .	423
8.5.4. Examples of 3D transient simulation . . . . .	424
8.6. Conclusion . . . . .	430
8.7. Bibliography . . . . .	431
<b>List of Authors . . . . .</b>	<b>441</b>
<b>Index . . . . .</b>	<b>443</b>
