Stephan Herminghaus

WET GRANULAR MATTER

A Truly Complex Fluid

Published by

World Scientific Publishing Co. Pte. Ltd.

5 Toh Tuck Link, Singapore 596224

USA office: 27 Warren Street, Suite 401-402, Hackensack, NJ 07601

UK office: 57 Shelton Street, Covent Garden, London WC2H 9HE

Library of Congress Cataloging-in-Publication Data

Herminghaus, S. (Stephan)

Wet granular matter : a truly complex fluid / Stephan Herminghaus, Max Planck Institute for Dynamics and Self-Organisation, Germany.

pages cm. -- (Series in soft condensed matter ; vol. 6)

Includes bibliographical references and index.

ISBN 978-9814417693 (hardcover : alk. paper)

1. Soft condensed matter. 2. Wetting. 3. Granular materials--Permeability.
4. Granular materials--Mechanical properties. I. Title.

QC173.458.S62H47 2013

Contents

<i>Foreword</i>	vii
<i>Preface</i>	ix
1. Introduction	1
1.1 The significance of wet granular matter	2
1.2 Energy scales	4
1.3 Typical questions to be asked	7
1.4 How we shall proceed	12
2. Grains and Granular Fluids	15
2.1 Grains	15
2.1.1 Kinetic theory	15
2.1.2 Dissipative collisions	18
2.1.3 Grain shape	26
2.1.4 Grain size	30
2.1.5 Some phenomenological aspects of dry granulates	32
2.2 Granular fluids	34
2.2.1 Buoyant clouds	36
2.2.2 Filling an earthquake fissure	39
2.2.3 Granular flow with gaseous carrier	43
2.2.4 Granular flow with liquid carrier	47
2.2.5 Dilatancy	53
2.3 Conclusions	58

3.	Wetting	61
3.1	Planar substrates	63
3.1.1	Van der Waals forces	63
3.1.2	Adsorption isotherms	64
3.1.3	The contact angle	66
3.1.4	The effective interface potential	69
3.1.5	The interface displacement model	71
3.1.6	Curved interfaces and the Laplace pressure	76
3.1.7	The contact angle away from coexistence	78
3.2	Rough substrates	79
3.2.1	Presentation of the problem	80
3.2.2	Descriptors for roughness	83
3.2.3	The wetting phase diagram	85
3.2.4	Adsorption isotherms on a rough substrate	88
3.2.5	Contact angle hysteresis	90
3.3	Conclusions	93
4.	Capillary Forces	97
4.1	Capillary bridge between flat walls	98
4.1.1	Extremal surfaces	98
4.1.2	Attractive force of a toroidal bridge	100
4.2	Capillary bridge between spherical bodies	102
4.2.1	Formation of the capillary bridge	103
4.2.2	Capillary bridge force	108
4.2.3	The interaction potential between wet grains	111
4.2.4	The hysteretic nature of the capillary bridge force	114
4.3	Capillary bridge between irregular grains	116
4.3.1	Effects of grain shape	116
4.3.2	Effects of grain surface roughness	117
4.3.3	Small scale capillary bridges	118
4.4	Force networks	122
4.4.1	Frustrated wet force networks	122
4.4.2	Self-assembled granular walkers: ratcheting	124
4.5	Conclusions	129
5.	Wet Granular Gases	131
5.1	Dynamical aspects of capillary bridges	132
5.1.1	Short time dynamics of a capillary bridge	132

5.1.2	The effective restitution coefficient	139
5.2	Free cooling and clustering	143
5.2.1	Granular temperature during free cooling	148
5.2.2	Morphology of the emerging clusters	150
5.2.3	A formal distinction between dry and wet cooling	152
5.3	Liquid-gas coexistence	154
5.3.1	Equation of state of wet granular gases	154
5.3.2	Experimental verification of the critical point	158
5.3.3	Non-equilibrium phase separation	163
5.3.4	Universal aspects of the phase diagram	170
5.3.5	The interplay of dissipation mechanisms	175
5.3.6	Interfaces and interfacial tensions	179
5.3.7	Binodals and spinodals, wet and dry	182
5.4	Collective phenomena far from thermal equilibrium	192
5.4.1	Surface tension revisited	196
5.4.2	Chaoticity of the wet granular gas	199
5.4.3	Capillary bridges as active networks	202
5.5	Conclusions	205
6.	Wet Granular Piles	207
6.1	Geometrical aspects of granular piles	208
6.1.1	Random piles of equal spheres	208
6.1.2	Effects of grain size: poly-dispersity	211
6.1.3	Effects of grain shape	214
6.2	Regimes of wetness	217
6.2.1	The humidity regime	217
6.2.2	The pendular regime	221
6.2.3	The funicular regime	225
6.2.4	The bubble regime	242
6.3	Mechanical properties of wet granular piles	248
6.3.1	Tensile strength	248
6.3.2	Yield stress	253
6.4	Phase transitions in wet granular piles	265
6.4.1	Melting by vibration	265
6.4.2	'Quantum mud'	270
6.4.3	Surface melting	273
6.4.4	Melting by shear	274
6.5	Conclusions	280

7. Special Topics	283
7.1 The physics of sand castles	284
7.1.1 Mechanical stability	284
7.1.2 Distribution of liquid	287
7.1.3 Drip towers	288
7.2 Immiscible granular suspensions	292
7.2.1 Capillary suspensions	292
7.2.2 Pickering emulsions	296
7.3 Quicksand and quickclay	297
<i>List of Symbols</i>	301
<i>Bibliography</i>	305
<i>Index</i>	313
