Contents

Preface	<i>XIII</i>
About the Editors	<i>XVII</i>
List of Contributors	<i>XXI</i>

Part 1 Introduction 1

1	Introduction and Historical Developments	3
	<i>John W. Goodby</i>	
1.1	The Early Years up to about 1925	4
1.2	The Second Phase from 1925 to 1959	8
1.3	The Third Phase from 1960 to 1998	11
1.3.1	Lyotropic Liquid Crystals	15
1.3.2	Theory	15
1.3.3	Polymer-Dispersed Liquid Crystals and Anchoring	16
1.3.4	Materials and New Phases	17
1.3.5	Processing in Liquid Crystals	18
1.4	The Fourth Phase from 1998 to 2012	19
1.5	Conclusions	21
	References	21
2	Classification of Liquid Crystals According to Symmetry	27
	<i>Edward J. Davis and John W. Goodby</i>	
2.1	Introduction	27
2.2	Symmetry Operations and Symmetry Elements	27
2.2.1	The Identity	28
2.2.2	Rotation	28
2.2.3	Reflection	28
2.2.4	Inversion	29
2.2.5	Improper Rotation	30
2.3	Point Groups	30
2.4	The Symmetry of Mesophases Formed by Rod-Shaped Molecules	31

2.4.1	The Nematic Phase	31
2.4.2	The Chiral Nematic Phase	32
2.4.3	The Biaxial Nematic Phase	33
2.4.4	The Smectic A Phase	34
2.4.5	The Biaxial Smectic A Phase	35
2.4.6	The Smectic B Phase	37
2.4.7	The Smectic C, I, and F Phases	37
2.4.8	Ferroelectricity and Antiferroelectricity	39
2.4.8.1	Antiferroelectricity	42
2.5	The Symmetries of Mesophases Formed by Disk-Shaped Molecules	43
2.5.1	The “Discotic” Nematic Phase	43
2.5.2	Columnar Phases	45
2.5.2.1	Polar Columnar Phases	46
2.6	The Symmetries of Mesophases Formed by Bent-Shaped Molecules	49
2.6.1	The Biaxial Nematic Phase	49
2.6.2	Ferroelectric and Antiferroelectric Phases	52
2.6.2.1	The Biaxial Smectic A Phases	52
2.6.2.2	Tilted Polar Phases	53
	References	56
3	Phase Transitions: General and Fundamental Aspects	59
	<i>John W. Goodby</i>	
3.1	Simple Melting Behavior with an Enantiotropic Liquid Crystal Phase	61
3.2	Melting Behavior with Crystal–Crystal Phase Transitions	64
3.3	Melting Behavior with Monotropic Liquid Crystal Phases	65
3.4	Melting Behavior with Second-Order Phase Transitions	67
3.5	Glass Transitions in Liquid Crystal Systems	68
3.6	Transitions Outside the Liquid Crystal Envelope	69
3.7	Reproducibility of Phase Transitions, Reporting of Transition Temperatures, and Purity	73
	References	75
	Part 2 Basics of Liquid Crystals	77
4	Continuum Theory for Liquid Crystals	79
	<i>Iain W. Stewart</i>	
4.1	Introduction	79
4.2	Equilibrium Theory for Nematics	80
4.2.1	Notation	80
4.2.2	Nematics	81
4.2.3	Equilibrium Equations	84
4.2.4	Body Forces and Moments	85

4.2.5	Reformulation of the Equilibrium Equations	88
4.2.6	Boundary Conditions	90
4.2.7	Extensions to Nematic Equilibrium Theory	92
4.3	Dynamic Theory for Nematics	93
4.3.1	The Viscous Stress in Nematics	96
4.3.2	The Dynamic Equations for Nematics	97
4.3.3	Reformulation of the Dynamic Equations	98
4.3.4	Extension to the Dynamic Theory of Biaxial Nematics	100
4.4	Continuum Theory for Smectic Liquid Crystals	100
4.4.1	SmC Liquid Crystals	100
4.4.2	Equilibrium Equations	104
4.4.3	Dynamic theory for smectic C	107
4.4.4	Extension to Other Related Smectic Theories	109
	References	110
5	Molecular Theories of Liquid Crystals	115
	<i>Mikhail Osipov</i>	
5.1	Introduction	115
5.2	Microscopic Approach to the Order Parameters of the Nematic and Smectic Phases	116
5.2.1	The Uniaxial Nematic Phase	116
5.2.2	Biaxial Nematic Phase	118
5.2.3	Smectic A Phase	121
5.2.4	Smectic C Phase	122
5.3	Anisotropic Interactions between Mesogenic Molecules	123
5.3.1	Hard Core Repulsion	123
5.3.2	Electrostatic and Dispersion Interactions	124
5.3.3	Model Interaction Potentials	126
5.4	Molecular-Statistical Theory of Nematics	128
5.4.1	Molecular-Field Approximation	128
5.4.2	Maier–Saupe Theory	130
5.4.3	Short-Range Orientational Correlations in Nematics	132
5.4.4	Excluded Volume Effects and the Onsager Theory	133
5.4.5	The Role of Packing Entropy in Thermotropic Nematics	135
5.4.6	Density Functional Approach	138
5.4.7	Molecular Theory of Biaxial Nematics	140
5.5	Molecular Theory of Simple Smectic Phases	146
5.5.1	McMillan–Kobayashi Theory	146
5.5.2	Smectic Ordering in the System of Hard Rods	148
5.5.3	Generalized van der Waals Theory of Smectics A	150
5.5.4	Molecular Theory of the Smectic C Phase	154
5.5.5	Smectics C with Anomalously Weak Layer Contraction	160
5.5.6	Biaxial Ordering and Ferroelectricity in the Chiral Smectic C Phase	161

5.6	Conclusions	164
	Acknowledgements	165
	References	165
6	General Strategies for the Synthesis of Liquid Crystals	169
	<i>Richard J. Mandle and John W. Goodby</i>	
6.1	Introduction	169
6.2	Retrosynthetic Analysis	169
6.3	Functional Group Addition and Interconversion	172
6.4	Protecting Groups	176
6.4.1	Protecting Groups for Carboxylic acids	177
6.4.2	Protecting Groups for Alcohols and Phenols	178
6.4.3	Protecting Groups for Aldehydes and Ketones	179
6.5	General Guidelines for Thermotropic Liquid Crystals	180
6.5.1	Calamitic Systems	180
6.5.2	Bent Core Systems	183
6.5.3	Liquid Crystal Dimers	184
6.5.4	Discotic Liquid Crystals	187
6.5.5	Chiral Modifications	188
6.6	Common Reactions in Liquid Crystal Synthesis	190
6.6.1	Aryl–Aryl Bond Formation	190
6.6.2	Aryl–Alkyl Bond Formation	191
6.6.3	Linking Groups	192

7.4	Phases with Helical Structure	202
7.4.1	The Chiral Nematic Phase	204
7.4.2	Helical Smectic Phases	209
7.4.2.1	The Smectic C* Phase	209
7.4.2.2	The Smectic I* and Smectic F* Phases	211
7.4.2.3	The Soft Crystal Phases (J*, G*, H*, and K*)	212
7.5	Space Symmetry	212
7.6	Frustrated Phases	217
7.6.1	Blue Phases	217
7.6.2	Twist Grain Boundary Phases	219
7.6.3	Smectic Blue Phases	222

7.7	Inversion of Chiral Properties	224
7.8	The Effects of Optical Purity	227
	References	228
8	Chemical Structure and Mesogenic Properties	231
	<i>John W. Goodby, Edward J. Davis, Richard J. Mandle, and Stephen J. Cowling</i>	
8.1	Introduction	231
8.2	Molecular Topology	231
8.3	The Building Blocks	234
8.4	Electrostatic Interactions	235
8.5	Lateral Substitution and Interactions	240
8.6	Steric Shape	246
8.7	Molecular Topology and Void Volumes	252
8.8	Self-Organization Versus Self-Assembly	255
8.9	Summary	256
	References	258
	Part 3 Characterization of Liquid Crystals	261
9	Optical Microscopy Studies of Liquid Crystals	263
	<i>Stephen J. Cowling</i>	
9.1	Introduction	263
9.2	Microscopy Preparations of Liquid Crystals	263
9.3	Promoting Homeotropic or Homogeneous Alignment	264
9.3.1	<i>Schlieren</i> Defect Textures	266
9.4	Focal-Conic Defect Textures	271
9.5	Edge and Screw Dislocations	273
9.6	Dupin Cyclides	274
9.7	Parabolic Defects	278
9.8	The Volterra Process	280
9.9	Frustrated Phases	284
9.9.1	Blue Phases	284
9.10	Twist-Grain Boundary Phases	287
9.11	Freestanding Films	290
9.12	Columnar Liquid Crystals	291
9.13	Lyotropic Liquid Crystals	295
