United Kingdom

Cover design:

The cover shows aurein 2.3, a typical amphibian antimicrobial peptide in the presence of a lipid bilayer. The molecular dynamics simulation was undertaken by Dr. Manuela Mura, University of Central Lancashire. This MD simulation shows the potential of aurein 2.3 to use a pore-type mechanism of membrane interaction.

All books published by **Wiley-VCH** are carefully produced. Nevertheless, authors, editors, and publisher do not warrant the information contained in these books, including this book, to be free of errors. Readers are advised to keep in mind that statements, data, illustrations, procedural details or other items may inadvertently be inaccurate.

Contents

Preface IX

List of Abbreviations XIII

- 1 Antimicrobial Peptides: Their History, Evolution, and Functional Promiscuity** 1
- Summary 1
- 1.1 Introduction: The History of Antimicrobial Peptides 1
- 1.2 AMPs: Evolutionarily Ancient Molecules 4
- 1.3 AMPs: Multifunctional Molecules 11
- 1.3.1 Defensins as Effectors of Immunity 12
- 1.3.2 Defensins and Wound Healing 16
- 1.3.3 Defensins and Canine Coat Color 17
- 1.4 Discussion 17
- References 19
- 2 Cationic Antimicrobial Peptides** 39
- Summary 39
- 2.1 Introduction 39
- 2.2 CAMPs and Their Antimicrobial Action 42
- 2.3 CAMPs That Adopt an α -Helical Structure 43
- 2.4 CAMPs That Adopt a β -Sheet Structure 51
- 2.5 CAMPs That Adopt Extended Structures Rich in Specific Residues 55
- 2.6 Discussion 60
- References 62
- 3 Anionic Antimicrobial Peptides** 83
- Summary 83
- 3.1 Introduction 83
- 3.2 AAMPs in the Respiratory Tract 85
- 3.3 AAMPs in the Brain 87
- 3.4 AAMPs in the Epidermis 91
- 3.5 AAMPs in the Epididymis 94

3.6	AAMPs in Blood Components	96
3.7	AAMPs in the Gastrointestinal Tract and Food Proteins	97
3.8	AAMPs and Their Structure–Function Relationships	99
3.9	Discussion	101
	References	102
4	Graphical Techniques to Visualize the Amphiphilic Structures of Antimicrobial Peptides	115
	Summary	115
4.1	Introduction	115
4.2	Amphiphilic Structures Adopted by AMPs	116
4.3	Qualitative Methods for Identifying Amphiphilic Structure	118
4.4	Quantitative Techniques for Analyzing Amphiphilic Structure	121
4.4.1	Techniques Based on Hydropathy Plot Analysis	121
4.4.2	Techniques Based on Fourier Transforms	123
4.4.3	Amphipathic Index	124
4.4.4	Hydrophobic Moment Analysis	124
4.4.4.1	Choice of Hydrophobicity Scales	125
4.4.4.2	Effect of Sequence Length on Amphiphilicity	126
4.4.5	Classification of Amphiphilic α -Helices Using the Approach of Segrest	127
4.4.6	Amphiphilicity Profiling Analysis of Tilted α -Helices	129
4.4.7	Extended Hydrophobic Moment Plot Analysis of Tilted α -Helices	130
4.4.8	Amphiphilicity Quantified Using the Approach of Keller	130
4.4.9	Amphiphilicity Quantified Using the Approach of Brasseur	132
4.5	Discussion	133
	References	135
5	Models for the Membrane Interactions of Antimicrobial Peptides	145
	Summary	145
5.1	Introduction	145
5.2	CM-Associated Factors That Affect the Antimicrobial Action of α -CAMPs	149
5.3	Mechanisms Used by CAMPs for Microbial Membrane Interaction	154
5.4	Established Models for the Membrane Interactions of α -AMPs	155
5.4.1	Barrel-Stave and Toroidal Pore Models	155
5.4.2	Carpet Mechanism and the Shai–Huang–Matsuzaki Model	158
5.5	Recent Novel Models for the Membrane Interactions of α -AMPs	159
5.6	Tilted Peptide Mechanism	161
5.7	Amyloidogenic Mechanisms	163
5.8	Discussion	166
	References	168

6	Selectivity and Toxicity of Oncolytic Antimicrobial Peptides	181
	Summary	181
6.1	Introduction	181
6.2	Peptide-Based Factors That Contribute to the Anticancer Action of Anticancer Peptides	183
6.2.1	Sequence Length	187
6.2.2	Net Positive Charge	187
6.2.3	Hydrophobicity	191
6.2.4	Amphiphilicity	195
6.3	Membrane-Based Factors That Contribute to the Anticancer Action of ACPs	196
6.3.1	Membrane Receptors	199
6.3.2	Cholesterol	199
6.3.3	Anionic Membrane Components	200
6.3.4	Glycoproteins and Glycolipids	201
6.3.5	Proteoglycans	202
6.3.6	Phospholipids	203
6.4	Discussion	205
	References	207
