1 Introduction 1

1.1 Applications . . . 1
1.1.1 Random Vibration of Structures . . . 1
1.1.2 Fatigue Life . . . 3
1.1.3 Ocean-Wave Forces . . . 4
1.1.4 Wind Forces . . . 6
1.1.5 Material Properties . . . 7
1.1.6 Statistics and Probability . . . 8
1.2 Units . . . 10
1.3 Organization of the Text . . . 10
1.4 Quotes . . . 11
1.5 Problems . . . 11

2 Events and Probability 13

2.1 Sets . . . 13
2.1.1 Basic Events . . . 14
2.1.2 Operational Rules . . . 18
2.2 Probability . . . 22
2.2.1 Axioms of Probability . . . 24
2.2.2 Extensions from the Axioms . . . 25
2.2.3 Conditional Probability . . . 26
2.2.4 Statistical Independence . . . 28
2.2.5 Total Probability . . . 29
2.2.6 Bayes' Theorem . . . 33
2.3 Summary . . . 39
2.4 Quotes . . . 39
2.5 Problems . . . 40

3 Random Variable Models **43**
3.1 Probability Distribution Function 44
3.2 Probability Density Function 46
3.3 Probability Mass Function 53
3.4 Mathematical Expectation 55
3.4.1 Mean Value 56
3.4.2 Variance 58
3.5 Useful Continuous Probability Density Functions 63
3.5.1 Uniform Density 63
3.5.2 Exponential Density 65
3.5.3 Normal or Gaussian Density 67
3.5.4 Lognormal Density 77
3.5.5 Rayleigh Density 80
3.6 Discrete Density Functions 86
3.6.1 Binomial Density Function 86
3.6.2 Poisson Density Function 88
3.7 Moment-Generating Function 89
3.7.1 Characteristic Function 91
3.8 Two Random Variables 94
3.8.1 Marginal Densities 95
3.8.2 Conditional Density Function 101
3.8.3 Total Probability Revisited 106
3.8.4 Covariance and Correlation 107
3.9 Summary 114
3.10 Quotes 114
3.11 Problems 115

4 Functions of Random Variables **123**
4.1 Exact Functions of One Variable 123
4.2 Functions of Two or More Random Variables 129
4.2.1 General Case 141
4.3 Approximate Analysis 149
4.3.1 Direct Methods 149
4.3.2 Mean and Variance of a General Function of X to Order σ_X^2 152
4.3.3 Mean and Variance of a General Function of n RVs 156
4.4 Monte Carlo Methods 163
4.4.1 Independent Uniform Random Numbers 164
4.4.2 Independent Normal Random Numbers 167
4.4.3 A Discretization Procedure 168
4.4.4 Generation of Jointly Distributed Random Variables 170
4.5 Summary 171
4.6 Quotes 171
4.7 Problems 172

5 Random Processes **177**
5.1 Basic Random Process Descriptors . . . 177
5.2 Ensemble Averaging . . . 178
5.3 Stationarity . . . 183
5.4 Correlations of Derivatives . . . 191
5.5 Fourier Series and Fourier Transforms . . . 194
5.5.1 Sifting Theorem . . . 201
5.5.2 Time Differentiation . . . 203
5.5.3 Convolution Theorem . . . 203
5.5.4 Shifting Theorem . . . 205
5.5.5 Scaling Theorem . . . 206
5.6 Harmonic Processes . . . 206
5.7 Power Spectra . . . 208
5.7.1 Discussion of the Wiener-Khinchine Theorem . . . 210
5.7.2 Power Spectrum Units . . . 228
5.8 Narrow- and Broad-Band Processes . . . 229
5.8.1 White Noise Processes . . . 232
5.9 Interpretations of Correlations and Spectra . . . 233
5.10 Spectrum of Derivative . . . 235
5.11 Fourier Representation of a Stationary Process . . . 237
5.11.1 Borgman's Method of Frequency Discretization . . . 242
5.12 Summary . . . 244
5.13 Quotes . . . 245
5.14 Problems . . . 246

6 Single Degree-of-Freedom Vibration **251**
6.1 Motivating Examples . . . 252
6.1.1 Transport of a Satellite . . . 252
6.1.2 Rocket . . . 254
6.2 Newton's Second Law . . . 255
6.3 Free Vibration With No Damping . . . 261
6.4 Harmonic Forced Vibration With No Damping . . . 263
6.4.1 Resonance . . . 263
6.5 Free Vibration with Viscous Damping . . . 267
6.6 Forced Harmonic Vibration . . . 268
6.6.1 Harmonic Base Excitation . . . 270
6.7 Impulse Excitation . . . 276
6.8 Arbitrary Loading . . . 277
6.9 Frequency Response Function . . . 281
6.10 SDOF: The Response to Random Loads . . . 284
6.10.1 Mean Value of Response . . . 284
6.10.2 Response Correlations . . . 285
6.10.3 Response Spectral Density . . . 289
6.11 Response to Two Random Loads . . . 298
6.12 Summary . . . 305
6.13 Quotes . . . 305
6.14 Problems . . . 306

7 Multi Degree-of-Freedom Vibration **311**
7.1 Deterministic Vibration . . . 311
7.1.1 Impulse Response Function . . . 313
7.1.2 Modal Analysis . . . 314
7.1.3 Advantages of Modal Analysis . . . 319
7.2 Response to Random Loads . . . 321
7.2.1 Response Due to a Single Random Force . . . 322
7.2.2 Response to Multiple Random Forces . . . 325
7.3 Periodic Structures . . . 341
7.3.1 Perfect Lattice Models . . . 342
7.3.2 Effects of Imperfection . . . 344
7.4 Inverse Vibration . . . 346
7.4.1 Deterministic Inverse Vibration Problem . . . 347
7.4.2 Effect of Uncertain Data . . . 349
7.5 Random Eigenvalues . . . 354
7.6 Summary . . . 359
7.7 Quotes . . . 360
7.8 Problems . . . 360

8 Continuous System Vibration **367**
8.1 Deterministic Continuous Systems . . . 367
8.1.1 Strings . . . 367
8.1.2 Axial Vibration of Beams . . . 370
8.1.3 Transversely Vibrating Beams . . . 372
8.2 The Eigenvalue Problem . . . 374
8.2.1 Orthogonality . . . 375
8.2.2 Natural Frequencies and Mode Shapes . . . 377
8.3 Deterministic Vibration . . . 381
8.3.1 Free Response . . . 382
8.3.2 Forced Response via Eigenfunction Expansion . . . 383
8.4 Random Vibration of Continuous Systems . . . 388
8.4.1 Derivation of Response Spectral Density . . . 389
8.5 Beams with Complex Loading . . . 398
8.5.1 Transverse Vibration of Beam with Axial Force . . . 398
8.5.2 Transverse Vibration of Beam on Elastic Foundation . . . 400
8.5.3 Response of a Beam to a Traveling Force . . . 404
8.6 Summary . . . 408
8.7 Quotes . . . 408
8.8 Problems . . . 409

9 Reliability **413**
9.1 Introduction . . . 413
9.2 First Excursion Failure . . . 414
9.2.1 The Exponential Failure Law . . . 415
9.2.2 Modified Exponential Failure Law . . . 424
9.2.3 The Up-Crossing Rate, ν_Z^+ . . . 425
9.2.4 Envelope Function for a Narrow-Band Process . . . 432
9.2.5 Rice's Envelope Function for Gaussian Narrow-Band Process . . . 433

9.3 Other Failure Laws . . . 445
9.3.1 Gamma Failure Law . . . 445
9.3.2 Normal Failure Law . . . 447
9.3.3 The Weibull Failure Law . . . 448
9.4 Fatigue Life Prediction . . . 450
9.4.1 Failure Curves . . . 451
9.4.2 Peak Distribution for Stationary Random Process . . . 454
9.4.3 Peak Distribution of a Gaussian Process . . . 456
9.4.4 Special Cases . . . 458
9.5 Summary . . . 465
9.6 Quotes . . . 465
9.7 Problems . . . 466

10 Nonlinear and Stochastic Dynamic Models **469**
10.0.1 Chapter Overview . . . 469
10.0.2 Examples of Nonlinear Vibration . . . 471
10.0.3 Approximate Solution of Simple Pendulum . . . 475
10.0.4 Exact Solution of Simple Pendulum . . . 475
10.0.5 The Duffing and the van der Pol Equations . . . 477
10.1 The Phase Plane . . . 477
10.1.1 Stability of Equilibria . . . 482
10.2 Statistical Equivalent Linearization . . . 486
10.2.1 Equivalent Nonlinearization . . . 493
10.3 Perturbation Methods . . . 495
10.3.1 Lindstedt-Poincaré Method . . . 500
10.3.2 Forced Oscillations of Quasi-Harmonic Systems . . . 502
10.3.3 Jump Phenomena . . . 505
10.3.4 Periodic Solutions of Non-Autonomous Systems . . . 507
10.3.5 Random Duffing Oscillator . . . 513
10.3.6 Subharmonic and Superharmonic Oscillations . . . 515
10.4 The Mathieu Equation . . . 519
10.5 The van der Pol Equation . . . 524
10.5.1 The Unforced van der Pol Equation . . . 525
10.5.2 Limit Cycles . . . 525
10.5.3 The Forced van der Pol Equation . . . 526
10.6 Markov Process-Based Models . . . 530
10.6.1 Probability Background . . . 531
10.6.2 The Fokker-Planck Equation . . . 535
10.7 Summary . . . 550
10.8 Quotes . . . 550
10.9 Problems . . . 551

11 Nonstationary Models **555**
11.1 Envelope Function Model . . . 559
11.1.1 Transient Response . . . 560
11.1.2 Mean Square Nonstationary Response . . . 564
11.2 Nonstationary Generalizations . . . 566
11.2.1 Deterministic Preliminaries . . . 566

11.2.2 Discrete Random Model . . . 567
11.2.3 Complex-Valued Stochastic Processes . . . 568
11.2.4 Continuous Random Model . . . 569
11.3 Priestley's Model . . . 570
11.3.1 The Stieltjes Integral: An Introduction . . . 570
11.3.2 Priestley's Model . . . 572
11.4 Oscillator Response . . . 572
11.4.1 Stationary Case . . . 573
11.4.2 Nonstationary Case . . . 574
11.4.3 Undamped Oscillator . . . 575
11.4.4 Underdamped Oscillator . . . 576
11.5 Multi Degree-of-Freedom Oscillator Response . . . 579
11.5.1 Input Characterization . . . 579
11.5.2 Response Characterization . . . 580
11.6 Nonstationary and Nonlinear Oscillator . . . 582
11.6.1 The Nonstationary and Nonlinear Duffing Equation . . . 583
11.7 Summary . . . 585
11.8 Quotes . . . 585
11.9 Problems . . . 586

12 Monte Carlo Methods **587**
12.1 Introduction . . . 587
12.2 Random Number Generation . . . 590
12.2.1 Standard Uniform Random Numbers . . . 590
12.2.2 Generation of Nonuniform Random Variates . . . 594
12.2.3 Composition Method . . . 603
12.2.4 Von Neumann's Rejection-Acceptance Method . . . 605
12.3 Joint Random Numbers . . . 607
12.3.1 Inverse Transform Method . . . 608
12.3.2 Linear Transform Method . . . 609
12.4 Error Estimates . . . 612
12.5 Applications . . . 616
12.5.1 Evaluation of Finite-Dimensional Integrals . . . 616
12.5.2 Generating a Time History for a Stationary Random Process Defined by a Power Spectral Density . . . 622
12.6 Summary . . . 623
12.7 Quotes . . . 623
12.8 Problems . . . 624

13 Fluid-Induced Vibration **627**
13.1 Ocean Currents and Waves . . . 627
13.1.1 Spectral Density . . . 628
13.1.2 Ocean Wave Spectral Densities . . . 631
13.1.3 Approximation of Spectral Density from Time Series . . . 636
13.1.4 Generation of Time Series from a Spectral Density . . . 637
13.1.5 Short-Term Statistics . . . 638
13.1.6 Long-Term Statistics . . . 642
13.1.7 Wave Velocities via Linear Wave Theory . . . 644

13.2 Fluid Forces in General 646
13.2.1 Wave Force Regime 646
13.2.2 Wave Forces on Small Structures – Morison Equation 648
13.2.3 Vortex-Induced Vibration 650
13.3 Examples 654
13.3.1 Static Configuration of a Towing Cable 655
13.3.2 Fluid Forces on an Articulated Tower 657
13.3.3 Weibull and Gumbel Wave Height Distributions 660
13.3.4 Reconstructing a Time Series for a Given Significant Wave Height . . 662
13.4 Available Numerical Codes 664
13.5 Summary 664
13.6 Quotes 664

14 Probabilistic Models in Controls and Mechatronic Systems **667**
14.1 Concepts of Deterministic Systems 669
14.1.1 Introduction to Feedback Control 669
14.1.2 Advantages and Disadvantages of Feedback Control 677
14.1.3 State-Space Models 678
14.1.4 Transfer Function from State-Space Model 683
14.1.5 Controllability and Observability 685
14.1.6 State Feedback 688
14.1.7 State Observer 690
14.1.8 State Feedback Control with State Observer 695
14.1.9 Multivariable Control 697
14.2 Concepts of Stochastic Systems 700
14.2.1 Stochastic vs. Random 700
14.2.2 Probabilistic Background Concepts 701
14.3 Filtering of Random Signals 707
14.3.1 Types of Filters 708
14.3.2 Ideal vs. Practical Filters 708
14.4 White Noise Filters 715
14.4.1 White Noise 715
14.4.2 Properties of White Noise Filters 716
14.5 Stochastic System Models 721
14.5.1 MIMO Stochastic System Model 722
14.6 The Kalman Filter 723
14.6.1 Introduction to Kalman Filter 723
14.6.2 Deriving the Kalman Filter Equations 726
14.7 Additional Issues 735
14.7.1 Extended Kalman Filter 735
14.7.2 Optimal Compensators 736
14.8 Summary 737
14.9 Quotes 738

Index **739**
