Contents

Preface ix

1. **Fundamentals of electrochemical impedance spectroscopy** 1
   - 1.1. Concept of complex impedance 1
   - 1.2. Complex dielectric, modulus, and impedance data representations 6
   - 1.3. Electrochemical experiment: charge and material transport 14
   - 1.4. Fundamental ambiguity of impedance spectroscopy analysis 19

2. **Graphical representation of impedance spectroscopy data** 23
   - 2.1. Nyquist and Bode representation of complex impedance data for ideal electrical circuits 23
   - 2.2. Dielectric data representation 32

3. **Equivalent-circuit elements and modeling of the impedance phenomenon** 37
   - 3.1. Ideal circuit elements 37
   - 3.2. Nonideal circuit elements 39
   - 3.3. Circuit models for systems with two and more time constants 44

4. **Examples of ideal equivalent circuit models** 49
   - 4.1. Basic R-C circuit 49
   - 4.2. Basic R|C circuit 51
   - 4.3 Randles $R_{SOL} - R_{CT}|C_{DL}$ circuit 53
   - 4.4. Debye dielectric relaxation $(R_1 - C_1)|C_2$ circuit 54

5. **Impedance representation of bulk-material and electrode processes** 59
   - 5.1. Uncompensated impedance Z_{OHM} 60
   - 5.2. Bulk-media impedance—R_{SOL}, R_{BULK}, and C_{BULK} 61
   - 5.3. Electrochemical double-layer capacitance C_{DL} 69

5.4. Electrochemical charge-transfer resistance R_{CT} 73
5.5. Electrochemical sorption impedance Z_{SORP} 77
5.6. Mass-transport impedance 78
5.7. Mixed charge-transfer, homogeneous, and diffusion-controlled kinetics 87

6. Distributed impedance models

6.1. Distributed $R_{BULK}|C_{BULK} - R_{INT}|CPE_{DL}$ circuit model 97
6.2. General impedance models for distributed electrode processes 102
6.3. Identification of frequency ranges for conductivity and permittivity measurements 108

7. Impedance analysis of complex systems 113

7.1. Dielectric analysis of highly resistive composite materials with particle conduction 113
7.2. Dielectric analysis of ionic colloidal suspensions 123
7.3. AC electrokinetics and dielectrophoretic spectroscopy of colloidal suspensions 130
7.4. Specific adsorption and multistep heterogeneous kinetics 145
7.5. Impedance kinetics studies on porous electrodes 152

8. Impedance Instrumentation, testing, and data validation 163

8.1. Impedance test equipment 163
8.2. Single-sine impedance equipment—lock-in amplifier and frequency-response analyzer 165
8.3. Multiple-sine impedance equipment 169
8.4. Electrochemical cells 172
8.5. Linearity, causality, stability, consistency, and error analysis of impedance measurements 187
8.6. Complex nonlinear least-squares regression fitting 194
8.7. Practical approach to experimental impedance data collection and analysis 196

9. Selected examples of impedance-analysis applications: electroactive polymer films 205

9.1. The field of electroactive polymers 205
9.2. Impedance analysis of electrochemically active polymer films . 207
9.3. EIS models of conducting polymer films 208
9.4. The future of electroactive polymers 214

10. Selected examples of EIS analysis applications: industrial colloids and lubricants 219

10.1. The field of industrial colloids and lubricants 219
10.2. Physical and chemical properties of lubricants 222
10.3. Degradation modes of lubricants 224
10.4. Impedance analysis of lubricants 227
10.5. Equivalent-circuit model of lubricants 242

11. Selected examples of EIS analysis applications: cell suspensions, protein adsorption, and implantable biomedical devices 247

11.1. The field of biomedical impedance applications 247
11.2. Analysis of biological suspensions by dielectric, impedance, and AC electrokinetic methods 251
11.3. Impedance analysis of protein-adsorption kinetics 266
11.4. Impedance monitoring of implanted devices 271

12. Selected examples of impedance-analysis applications 281

12.1. Impedance analysis of insulating films and coatings 281
12.2. Impedance analysis of metallic paints 285
12.3. Electrorheological fluids and charged suspensions 289
12.4. Impedance of metal-oxide films and alloys 296
12.5. Li-ion kinetics in alkaline batteries 298
12.6. Impedance analysis of polymer electrolyte fuel cells 302
12.7. Impedance corrosion monitoring 309

13. Impedance-spectroscopy modifications 319

13.1. AC voltammetry 319
13.2. Potentiodynamic and Fourier-transform impedance spectroscopy 321
13.3. Nonlinear higher-harmonic impedance analysis 323
13.4. Local EIS 327
13.5. Scanning photo-induced impedance microscopy 328

14. Conclusions and perspectives of EIS 333
