# Contents

<b>1</b>	<b>Introduction</b>	<b>1</b>
<b>2</b>	<b>Carbon Properties</b>	<b>7</b>
2.1	Introduction	7
2.1.1	Carbon Atom	7
2.1.2	Allotropic Forms	9
2.2	<i>sp</i> Crystal: The Carbyne?	10
2.2.1	Polyynes	10
2.2.2	Applications	14
2.3	<i>sp</i> <sup>2</sup> Crystal	14
2.3.1	Graphene	14
2.3.1.1	Outlook of basic properties	14
2.3.1.2	Schrödinger versus dirac	19
2.3.1.3	Breakdown of the Dirac Fermion behavior	21
2.3.1.4	Applications	23
2.3.2	Graphite	24
2.3.2.1	Structure and properties	24
2.3.2.2	Applications	26
2.3.3	Supergraphite	27
2.3.3.1	Structure and properties	27
2.3.3.2	Applications	29
2.3.4	Supergraphene	29
2.3.5	Periodic Schwarzite	29
2.3.5.1	Negative curvature and periodic minimal surface	29
2.3.5.2	Triply periodic minimal surfaces paved with <i>n</i> -gons	32

2.3.5.3	Octagons	33
2.3.5.4	Heptagons	34
2.3.5.5	Haeckelites or pentaheptites	37
2.3.5.6	Applications	39
2.4	Allotropic Form: $sp^3$ Crystal	39
2.4.1	Cubic Diamond	39
2.4.1.1	Structure and properties	39
2.4.1.2	Applications	43
2.4.2	Hexagonal Diamond	44
2.4.3	$sp^3$ Clathrate	47
2.4.3.1	Structure: clathrate zoo	47
2.4.3.2	Clathrate of class I	47
2.4.3.3	Clathrate of class II	51
2.5	Mixed Hybridized Systems	51
2.5.1	Hybrid Diamond-Graphite	51
2.5.2	Graphyne	52
2.5.3	Hyperdiamond	54
2.5.4	Hypergraphite	55
2.5.4.1	Structure	55
2.5.4.2	Applications	56
2.5.5	Rectangulated Carbon or Quasi-Lonsdaleite	57
2.5.6	Clathrate C-36 and Below	58
2.5.7	Fullerite	59
2.5.7.1	Fullerite zoo	59
2.5.8	Nanotube	63
2.5.9	Onion	63
2.5.10	What Survivals in Noah's Ark	65
2.6	Doping	65
2.6.1	Doping: A Breakthrough?	65
2.6.2	$sp^3$ Form	67
2.6.2.1	Diamond: Substitutional Doping	67
2.6.2.2	Applications	69
2.6.2.3	Clathrates: endohedral doping	69
2.6.3	$sp^2$ Form	70
2.6.3.1	Graphite: interstitial doping	70
2.6.3.2	Applications	73
2.7	Noncrystalline Forms	73

2.7.1	Failure in the $sp^3$ Bonding with Increasing Disorder	73
2.7.2	Amorphous Carbon: What Else?	74
2.7.3	Vitreous Carbon	74
2.7.3.1	Structure	74
2.7.3.2	Applications	76
2.7.4	Tetrahedral Amorphous Carbon	77
2.7.4.1	Applications	79
2.7.5	Disordered Hyperdiamond	79
2.8	Appendix: Stone-Wales Transformation	80
<b>3</b>	<b>Silicon Properties</b>	<b>83</b>
3.1	Introduction	83
3.1.1	Silicon Atom	83
3.1.2	Failure in the $sp$ and $sp^2$ Bonding	84
3.1.3	$sp^3$ Bonding	84
3.1.4	Beyond $sp^3$ Bonding	86
3.2	Allotropic Form: $sp^3$ Crystal	86
3.2.1	Tight Binding Model Versus Quasiparticle Theory of Electron Excitations	87
3.2.2	Cubic Diamond	89
3.2.2.1	Structure	89
3.2.2.2	Electronic properties	90
3.2.3	Hexagonal Diamond (Wurtzite)	91
3.2.4	Clathrate II	92
3.2.4.1	Crystallography	92
3.2.4.2	Topology	94
3.2.4.3	Synthesis	95
3.2.4.4	Electronic properties	95
3.3	Surface Reconstruction	96
3.3.1	Surface Reconstruction: The Driving Force	98
3.3.2	Dehybridization	99
3.3.3	Si (111) Reconstruction	102
3.3.4	Si (100) Reconstruction	105
3.4	Doping	108
3.4.1	Doping in Diamond Phase	108
3.4.1.1	Overview	108
3.4.1.2	Application	109

3.4.2	Doping in the Clathrate Phase	110
3.4.2.1	Endohedral doping	110
3.4.2.2	Clathrate I	111
3.5	Amorphous Silicon	111
3.5.1	A Long Piece of Mystery: The Amorphon	111
3.5.2	Other Models	115
3.5.3	Hydrogenated a-Si	117
3.5.4	Other Models	118
3.5.5	Quasicrystalline Phase	118
3.5.6	Polymorph Phase	118
3.5.7	Characterization	119
3.5.8	Applications	120
<b>4</b>	<b>Silicon Carbon Properties</b>	<b>121</b>
4.1	Introduction	121
4.2	Bulk Phase	122
4.2.1	$sp^2$ Against $sp^3$ Hybridization	122
4.2.2	Si-C Double Bond Graphene-Like Layers in Nanotubes: Towards $sp^2$ Hybridization?	122
4.2.3	Ionicity in SiC: An Unsolved Problem?	125
4.2.4	Chemical Ordering	128
4.2.5	Clathrate	129
4.2.6	Polytypism	129
4.2.7	Stability of Polytypism: An Obscure Problem	132
4.2.7.1	Empirical potential approach	133
4.2.7.2	Ising's model	135
4.2.8	Properties	136
4.2.8.1	Electronic properties	136
4.2.8.2	Vibrational properties	138
4.3	Application of the Polytypism	140
4.3.1	Transport Properties	140
4.3.2	Multi-Quantum Well Structure	141
4.3.3	APBs: MQWS Using Antiphase Boundary	142
4.3.4	GBs: MQWS Using Tunable Hexagonality	146
4.4	Surface Reconstruction	147
4.4.1	3C-SiC	147
4.4.1.1	SiC(110) surface	149
4.4.1.2	C-terminated $\beta$ -SiC(100) surface	149

4.4.1.3	Si-terminated $\beta$ -SiC(100) surface	151
4.4.1.4	Si-terminated $\beta$ -SiC(111) surface	151
4.4.2	<i>nH</i> -SiC	153
4.4.3	Application of the Surface Reconstruction	155
4.5	Amorphous Phase	155
4.5.1	Modeling $\alpha$ -SiC	155
4.5.2	Chemical Ordering: A Bottleneck	157
4.5.2.1	Statistic thermodynamic approach	158
4.5.2.2	Empirical potential	160
4.5.2.3	<i>ab initio</i> calculation	160
<b>5</b>	<b>Carbon: From Bulk to Small Clusters</b>	<b>163</b>
5.1	Clusters with the Whole Crystal Symmetry	163
5.1.1	General Consideration	163
5.1.2	<i>sp</i> Hybridization	163
5.1.3	<i>sp</i> <sup>2</sup> Hybridization: Alternant PAH's	167
5.1.4	<i>sp</i> <sup>3</sup> Hybridization	172
5.2	Hydrogen-Free Clusters	174
5.2.1	Isomeric Forms	174
5.2.2	General Consideration: Rehybridization	176
5.2.3	POAV Level 1	177
5.2.4	POAV Level 2	180
5.2.5	From Linear Chains to Rings	180
5.2.5.1	$N < 10$ atoms	180
5.2.5.2	$N < 20$ atoms	184
5.2.6	$20 < N < 60$ Atoms: From Rings to Planar Structures	185
5.2.7	$20 < N < 60$ Atoms Planar to Cages	186
5.2.7.1	Bottle half full	187
5.2.7.2	Bottle half empty	188
5.2.8	C <sub>20</sub> : The Bottleneck	188
5.2.8.1	C <sub>20</sub> H <sub>10</sub>	189
5.2.8.2	C <sub>20</sub> H <sub>20</sub>	189
5.2.8.3	C <sub>20</sub>	192
5.2.8.4	C <sub>n</sub> H <sub>m</sub> : What valence in C <sub>n</sub> ? $n = 20, 24, 26$ and $28$	198
5.2.9	C <sub>24</sub>	199
5.2.10	C <sub>24</sub> H <sub>12</sub>	200

5.2.11	$C_{26}$	200
5.2.12	$C_{28}$	200
5.3	Doping	203
5.3.1	$C_{28}$	203
5.3.1.1	Super carbon atom	203
5.3.1.2	$C_{28}H_4$ : Hybridization picture	204
5.3.1.3	$X@C_{28}$ : Electron transfer picture	206
5.3.1.4	$C@C_{28}$ : Charge transfer between homonuclear bonds	208
5.3.2	Doping: Beyond $C_{28}$	208
5.4	Surface Reconstruction	209
<b>6</b>	<b>Silicon: From Bulk to Small Clusters</b>	<b>213</b>
6.1	Clusters with the Whole Crystal Symmetry	213
6.1.1	Hydrogenated Si Clusters	213
6.1.2	Confinement Model	214
6.1.2.1	General consideration	214
6.1.2.2	Effective mass theory	215
6.1.2.3	Tight binding scheme	217
6.1.2.4	<i>Ab initio</i> calculation	217
6.1.3	Applications	218
6.2	Surface Reconstruction	220
6.3	Hydrogen-Free Clusters	222
6.3.1	The Role of Hydrogen	222
6.3.2	Hydrogen-Free Clusters	222
6.3.2.1	$Si_N$ cluster geometry: experimental evidence	222
6.3.2.2	$Si_N$ cluster geometry: theoretical point of view	226
6.3.2.3	$N < 10$ atoms	229
6.4	Endohedrally Doped Clusters	230
6.4.1	$Si_{20}$	232
6.4.1.1	$Si_{20}H_{20}$	232
6.4.1.2	$Si_{20}$	232
6.4.1.3	$X@Si_{20}$	233
6.4.2	$Si_{24}$	235
6.4.3	$Si_{28}$	235
6.4.3.1	Superatom	237

6.5	Applications	239
6.5.1	Isolated Phase: Luminescence	239
6.5.2	<i>Assembled Cages: Nanowires</i>	240
6.6	C <sub>60</sub> versus Si <sub>60</sub>	241
<b>7</b>	<b>Silicon Carbon: From Bulk to Small Clusters</b>	<b>245</b>
7.1	Clusters with the Whole Crystal Symmetry	245
7.2	Small Hydrogen-Free Clusters	247
7.2.1	Buckydiamond	248
7.2.1.1	Chemical ordering: SiC buckydiamond	248
7.2.1.2	Non-chemical ordering: core shell structure and amorphous state	248
7.2.2	Heterofullerenes	250
7.2.2.1	Heterofullerene synthesis	250
7.2.2.2	Properties	252
7.2.2.3	Phase separation in heterofullerene	255
7.2.2.4	Stability of the heterofullerenes	257
7.2.2.5	Met-car: Si <sub>8</sub> C <sub>12</sub>	257
7.2.2.6	Silicon-carbon cage-like structures	262
7.2.3	Endohedral Doping: The Case of C <sub>60</sub> @Si <sub>60</sub> Fullerene	265
7.3	Large Hydrogen-Free Clusters	265
7.3.1	Cubic Symmetry	265
7.3.2	Hexagonal Symmetry: A New Challenge	267
<b>8</b>	<b>Cage Like Materials: Application</b>	<b>271</b>
8.1	Introduction	271
8.2	Synthesis	271
8.2.1	Si Clathrate	271
8.2.1.1	Low-pressure synthesis	272
8.2.1.2	High-pressure synthesis	273
8.2.1.3	Non-equilibrium state	273
8.2.2	C Clathrate	274
8.3	Hard Materials	275
8.3.1	Equilibrium State	275
8.3.2	Non-Equilibrium State	278
8.4	Doping	280
8.4.1	Endohedral Doping	280

8.4.2	Applications	281
8.4.3	Optoelectronic Properties	282
8.4.4	Superconductivity	282
8.4.4.1	Basics of the BCS model	282
8.4.4.2	Superconductivity in doped cage	284
8.4.4.3	Superconductivity in cage-like based materials	284
8.5	Thermoelectric Power	286
8.5.1	Thermoelectric Power: An Outlook	286
8.5.2	Clathrates as Candidates for Thermoelectric Power	287
	<i>Conclusion</i>	289
	<i>References</i>	291
	<i>Index</i>	323
