Contents

1 Definition of Long Memory 1
1.1 Historic Overview 1
1.2 Data Examples 3
1.3 Definition of Different Types of Memory 19
1.3.1 Second-Order Definitions for Stationary Processes 19
1.3.2 Volatility Dependence 30
1.3.3 Second-Order Definitions for Nonstationary Processes . . . 31
1.3.4 Continuous-Time Processes 32
1.3.5 Self-similar Processes: Beyond Second-Order Definitions . 33
1.3.6 Other Approaches 38

2 Origins and Generation of Long Memory 43
2.1 General Probabilistic Models 43
2.1.1 Linear Processes with Finite Second Moments 43
2.1.2 Linear Processes with Infinite Second Moments 52
2.1.3 Nonlinear Processes—Volatility Models 55
2.1.4 Counting Processes 76
2.2 Physical Models 81
2.2.1 Temporal Aggregation 81
2.2.2 Cross-Sectional Aggregation 85
2.2.3 Particle Systems, Turbulence, Ecological Systems 90
2.2.4 Network Traffic Models 95
2.2.5 Continuous-Time Models 101
2.2.6 Fractals 105

3 Mathematical Concepts 107
3.1 Orthogonal Polynomials and Expansions 108
3.1.1 Orthogonal Polynomials—General Introduction 108
3.1.2 Hermite Polynomials and Hermite Expansion 110
3.1.3 Laguerre Polynomials 114
3.1.4 Jacobi Polynomials 116

3.1.5 Gegenbauer Polynomials . . . 117
3.1.6 Legendre Polynomials . . . 118
3.2 Multivariate Hermite Expansions . . . 119
3.3 Appell Polynomials . . . 129
3.3.1 General Motivation . . . 129
3.3.2 Definition . . . 130
3.3.3 Orthogonality . . . 133
3.3.4 Completeness and Uniqueness . . . 136
3.3.5 Extension Beyond Analytic Functions . . . 150
3.4 Multivariate Appell Polynomials and Wick Products . . . 153
3.4.1 Definition . . . 153
3.4.2 Connection to Cumulants and Other Important Properties . 155
3.4.3 Diagram Formulas . . . 160
3.5 Wavelets . . . 166
3.5.1 The Continuous Wavelet Transform (CWT) . . . 166
3.5.2 The Discrete Wavelet Transform (DWT) . . . 170
3.5.3 Computational Aspects and the Transition from Discrete to Continuous Time . . . 176
3.6 Fractals . . . 178
3.7 Fractional and Stable Processes . . . 188
3.7.1 Fractional Brownian Motion and Hermite–Rosenblatt Processes . . . 188
3.7.2 Linear Fractional Stable Motion . . . 201
3.7.3 Fractional Calculus . . . 206

4 Limit Theorems . . . 209
4.1 Tools . . . 209
4.1.1 Introduction . . . 209
4.1.2 How to Derive Limit Theorems? . . . 209
4.1.3 Spectral Representation of Stationary Sequences . . . 214
4.2 Limit Theorems for Sums with Finite Moments . . . 218
4.2.1 Introduction . . . 218
4.2.2 Normalizing Constants for Stationary Processes . . . 219
4.2.3 Subordinated Gaussian Processes . . . 221
4.2.4 Linear Processes . . . 231
4.2.5 Subordinated Linear Processes . . . 239
4.2.6 Stochastic Volatility Models and Their Modifications . . . 257
4.2.7 ARCH(∞) Models . . . 260
4.2.8 LARCH Models . . . 262
4.2.9 Summary of Limit Theorems for Partial Sums . . . 264
4.3 Limit Theorems for Sums with Infinite Moments . . . 265
4.3.1 Introduction . . . 265
4.3.2 General Tools: Regular Variation, Stable Laws and Point Processes . . . 266
4.3.3 Sums of Linear and Subordinated Linear Processes . . . 274

4.3.4 Stochastic Volatility Models 286
4.3.5 Subordinated Gaussian Processes with Infinite Variance . . 294
4.3.6 Quadratic LARCH Models 298
4.3.7 Summary of Limit Theorems for Partial Sums 298
4.4 Limit Theorems for Sample Covariances 299
4.4.1 Gaussian Sequences 300
4.4.2 Linear Processes with Finite Moments 307
4.4.3 Linear Processes with Infinite Moments 310
4.4.4 Stochastic Volatility Models 312
4.4.5 Summary of Limit Theorems for Sample Covariances . . . 313
4.5 Limit Theorems for Quadratic Forms 314
4.5.1 Gaussian Sequences 315
4.5.2 Linear Processes 321
4.5.3 Summary of Limit Theorems for Quadratic Forms 324
4.6 Limit Theorems for Fourier Transforms and the Periodogram . . . 325
4.6.1 Periodogram and Discrete Fourier Transform (DFT) 325
4.6.2 Second-Order Properties of the Fourier Transform and the Periodogram 326
4.6.3 Limiting Distribution 333
4.7 Limit Theorems for Wavelets 334
4.7.1 Introduction 334
4.7.2 Discrete Wavelet Transform of Stochastic Processes 334
4.7.3 Second-Order Properties of Wavelet Coefficients 336
4.8 Limit Theorems for Empirical and Quantile Processes 340
4.8.1 Linear Processes with Finite Moments 340
4.8.2 Applications and Extensions 345
4.8.3 Empirical Processes with Estimated Parameters 347
4.8.4 Linear Processes with Infinite Moments 349
4.8.5 Tail Empirical Processes 350
4.9 Limit Theorems for Counting Processes and Traffic Models 356
4.9.1 Counting Processes 356
4.9.2 Superposition of Counting Processes 358
4.9.3 Traffic Models 360
4.9.4 Renewal Reward Processes 362
4.9.5 Superposition of ON–OFF Processes 368
4.9.6 Simultaneous Limits and Further Extensions 372
4.10 Limit Theorems for Extremes 374
4.10.1 Gumbel Domain of Attraction 376
4.10.2 Fréchet Domain of Attraction 380
4.10.3 Stationary Stable Processes 383

5 Statistical Inference for Stationary Processes 385
5.1 Introduction 385
5.2 Location Estimation 389
5.2.1 Tests and Confidence Intervals Based on the Sample Mean 389

5.2.2 Efficiency of the Sample Mean . . . 393
5.2.3 M-Estimation . . . 397
5.3 Scale Estimation . . . 405
5.4 Heuristic Estimation of Long Memory . . . 409
5.4.1 Variance Plot . . . 409
5.4.2 Rescaled Range Method . . . 410
5.4.3 KPSS Statistic . . . 413
5.4.4 Rescaled Variance Method . . . 414
5.4.5 Detrended Fluctuation Analysis (DFA) . . . 414
5.4.6 Temporal Aggregation . . . 415
5.4.7 Comments . . . 416
5.5 Gaussian Maximum Likelihood and Whittle Estimation . . . 416
5.5.1 Exact Gaussian or Quasi-maximum Likelihood Estimation 416
5.5.2 Whittle Estimation . . . 420
5.5.3 Further Comments on the Whittle Estimator . . . 426
5.5.4 Some Technical Details for the Whittle Estimator . . . 430
5.5.5 Further Approximation Methods for the MLE . . . 431
5.5.6 Model Choice . . . 435
5.5.7 Comments on Finite Sample Properties and Further Extensions . . . 439
5.6 Semiparametric Narrowband Methods in the Fourier Domain . . . 440
5.6.1 Introduction . . . 440
5.6.2 Log-periodogram Regression—Narrowband LSE . . . 441
5.6.3 Local Whittle Estimation—Narrowband Whittle Estimation 445
5.6.4 Technical Details for Semiparametric Estimators in the Fourier Domain . . . 448
5.6.5 Comparison and Modifications of Semiparametric Estimators in the Fourier Domain . . . 457
5.7 Semiparametric Narrowband Methods in the Wavelet Domain . . . 461
5.7.1 Log Wavelet Regression . . . 461
5.7.2 Technical Details for Wavelet Estimators . . . 465
5.8 Optimal Rate for Narrowband Methods . . . 470
5.9 Broadband Methods . . . 476
5.9.1 Broadband LSE for FEXP(∞) Models . . . 476
5.9.2 Broadband Whittle Estimation for FEXP(∞) Models . . . 484
5.9.3 Adaptive Fractional Autoregressive Fitting . . . 486
5.9.4 General Conclusions on Broadband Estimators . . . 489
5.10 Parametric and Semiparametric Estimators—Summary . . . 491
5.11 Estimation for Panel Data . . . 491
5.12 Estimating Periodicities . . . 494
5.12.1 Identifying Local Maxima . . . 494
5.12.2 Identifying Strong Stochastic Periodicities . . . 496
5.13 Quantile Estimation . . . 499
5.14 Density Estimation . . . 501
5.14.1 Introduction . . . 501

5.14.2 Nonparametric Kernel Density Estimation Under LRD . . . 504
5.14.3 Density Estimation Based on the Cumulant Generating Function . . . 513
5.15 Tail Index Estimation . . . 516
5.16 Goodness-of-Fit Tests . . . 523

6 Statistical Inference for Nonlinear Processes . . . 529
6.1 Statistical Inference for Stochastic Volatility Models . . . 531
6.1.1 Location Estimation . . . 532
6.1.2 Estimation of Dependence Parameters . . . 534
6.1.3 Tail Index Estimation . . . 537
6.2 Statistical Inference for LARCH Processes . . . 538
6.2.1 Location Estimation . . . 539
6.2.2 Estimation of Dependence Parameters . . . 540
6.3 Statistical Inference for ARCH(∞) Processes . . . 551
6.3.1 Location Estimation . . . 552
6.3.2 Estimation of Dependence Parameters . . . 552

7 Statistical Inference for Nonstationary Processes . . . 555
7.1 Parametric Linear Fixed-Design Regression . . . 556
7.1.1 Asymptotic Distribution of the LSE . . . 556
7.1.2 The Regression Spectrum and Efficiency of the LSE . . . 561
7.1.3 Robust Linear Regression . . . 577
7.1.4 Optimal Deterministic Designs . . . 578
7.2 Parametric Linear Random-Design Regression . . . 580
7.2.1 Some Examples, Estimation of Contrasts . . . 581
7.2.2 Some General Results and the Heteroskedastic Case . . . 587
7.2.3 Randomly Weighted Partial Sums . . . 593
7.2.4 Spurious Correlations . . . 597
7.2.5 Fractional Cointegration . . . 604
7.3 Piecewise Polynomial and Spline Regression . . . 612
7.4 Nonparametric Regression with LRD Errors—Kernel and Local Polynomial Smoothing . . . 616
7.4.1 Introduction . . . 618
7.4.2 Fixed-Design Regression with Homoscedastic LRD Errors 637
7.4.3 Fixed-Design Regression with Heteroskedastic LRD Errors 648
7.4.4 Bandwidth Choice for Fixed Design Nonparametric Regression—Part I . . . 648
7.4.5 The SEMIFAR Model . . . 649
7.4.6 Bandwidth Choice for Fixed Design Nonparametric Regression—Part II: Data-Driven SEMIFAR Algorithms . 652
7.4.7 Trend Estimation from Replicates . . . 659
7.4.8 Random-Design Regression Under LRD . . . 664
7.4.9 Conditional Variance Estimation . . . 670
7.4.10 Estimation of Trend Functions for LARCH Processes . . . 673
7.4.11 Further Bibliographic Comments . . . 674

7.5 Trend Estimation Based on Wavelets . . . 675
7.5.1 Introduction . . . 675
7.5.2 Fixed Design . . . 675
7.5.3 Random Design . . . 683
7.6 Estimation of Time Dependent Distribution Functions and Quantiles . . . 685
7.7 Partial Linear Models . . . 689
7.8 Inference for Locally Stationary Processes . . . 692
7.8.1 Introduction . . . 692
7.8.2 Optimal Estimation for Locally Stationary Processes . . . 694
7.8.3 Computational Issues . . . 699
7.9 Estimation and Testing for Change Points, Trends and Related Alternatives . . . 700
7.9.1 Introduction . . . 700
7.9.2 Changes in the Mean Under Long Memory . . . 701
7.9.3 Changes in the Marginal Distribution . . . 707
7.9.4 Changes in the Linear Dependence Structure . . . 711
7.9.5 Changes in the Mean vs. Long-Range Dependence . . . 717
7.10 Estimation of Rapid Change Points in the Trend Function . . . 724

8 Forecasting . . . 733
8.1 Forecasting for Linear Processes . . . 733
8.1.1 Introduction . . . 733
8.1.2 Forecasting for FARIMA Processes . . . 738
8.1.3 Forecasting for FEXP Processes . . . 741
8.2 Forecasting for Nonstationary Processes . . . 743
8.3 Forecasting for Nonlinear Processes . . . 745
8.4 Nonparametric Prediction of Exceedance Probabilities . . . 746

9 Spatial and Space-Time Processes . . . 753
9.1 Spatial Models on $\mathbb{Z}^k$ . . . 753
9.2 Spatial FARIMA Processes . . . 755
9.3 Maximum Likelihood Estimation . . . 756
9.4 Latent Spatial Processes: An Example from Ecology . . . 762

10 Resampling . . . 771
10.1 General Introduction . . . 771
10.2 Some Basics on Bootstrap for i.i.d. Data . . . 775
10.3 Self-normalization . . . 776
10.4 The Moving Block Bootstrap (MBB) . . . 778
10.5 The Sampling Window Bootstrap (SWB) . . . 782
10.6 Some Practical Issues . . . 787
10.7 More Complex Models . . . 790
10.7.1 Bootstrap for the Heavy-Tailed SV Model . . . 790
10.7.2 Testing for Jumps in a Trend Function . . . 792

Appendix A Function Spaces 797
A.1 Convergence of Functions and Basic Definitions 797
A.2 L Spaces 797
A.3 The Spaces C and D 798

Appendix B Regularly Varying Functions 799

Appendix C Vague Convergence 801

Appendix D Some Useful Integrals 803

Glossary 805
