Contents

1 Introduction	1
References	3
2 Basis of Derivative Spectrophotometry	5
2.1 The Main Law of Light Absorption by a Substance	5
2.1.1 Reasons for Deviation from Bouguer's Law	7
2.2 Correctness and Accuracy of Spectrophotometric Data	10
2.2.1 Main Factors Influencing the Accuracy of Spectrophotometric Measurements	11
2.2.2 Difference (Differential) Spectrophotometry	15
2.2.3 Measurement Errors of Difference Spectrophotometry	17
2.3 Derivative Spectrophotometry	19
2.3.1 Methods of Derivative Signal Registration and Diagrams of Differential Analyzers	38
2.3.2 Parameter Optimization of the Differentiating Circuit	43
2.3.3 Derivative Spectrophotometry of Difference Spectra	53
2.3.4 Method of the Pulse Amplitude-Modulated Fluorescence for the Solution of Ecological-Biochemical Problems	54
References	57
3 The Derivative Spectrophotometry Method for Analysis of Biologically Active Substances	71
3.1 Derivative Spectrophotometry for Analysis of a Number of Guanidine Preparations	71
3.2 Chelating Ability of 1,3-Bis-((<i>p</i> -Chlorobenzylidene)amino) Guanidine: Complexes with Ca ²⁺ and La ³⁺ Ions	79
3.3 The Special Features of the Ca ²⁺ Binding by <i>mono</i> -, <i>bis</i> - and <i>tris</i> - Substituted Guanidine Derivatives	84
3.4 Special Features of Interaction of <i>Bis</i> -((Chlorobenzylidene)amino) Guanidine Derivatives with Ca ²⁺ Depending on the Chlorine Atom Position in the Molecule	93

3.5	The Specific Character of Ca^{2+} Interaction with ((Benzylidene)amino) Guanidine Derivatives Containing Electron-Donor or Electron-Acceptor Substituters	101
3.6	Special Features of Calcium Ions Interaction with <i>Bis</i> -((4-hydroxy-3-methoxybenzilidene)amino) Guanidine and <i>Bis</i> -((4-cyanobenzilidene) amino) Guanidine	107
3.7	The Proof of Polycomponent Composition of the Promising Antitumor Drug "Ukrain"	113
3.8	Derived Spectra Application for the Analysis of Derived Forms of Nondepolarizing Muscle Relaxant Tercuronium, of Vitamins and Hormones	125
3.8.1	Comparative Analysis of Tercuronium Derivatives	125
3.8.2	The Reasonability of Derived Spectra Application for the Analysis of Commercial Preparations of Vitamins and Hormones	128
3.9	The Importance of Derivative Spectrophotometry in Modern Studies of Aromatic Amino Acids and Proteins	133
3.9.1	Special Features of Derived Spectra of Phenylalanine, Tyrosine, and Tryptophan	135
3.9.2	Special Features of Phenylalanine Spectra Change Caused by Influence of Gamma Radiation	143
3.9.3	Specific Character of Tyrosine Spectra Changes Under Influence of Gamma-Radiation	149
3.9.4	The Character of Tryptophan Derived Spectra Change Under Influence of Gamma-Irradiation	154
3.9.5	The Comparative Characteristic of Albumin Denaturation Spectral Changes Under Thermal and Radiation Exposures	160
3.9.6	Changes of the Gamma Globulin Optical Spectra Under γ -Irradiation	167
3.9.7	Special Features of γ -Globulin Spectra Changes During γ -Globulin Denaturation Caused by Thermal and Radiation Exposure	174
3.9.8	The Coupling of Albumin Derived Spectra Change with the Determination Accuracy of Albumin/Globulin Coefficient for Radiation Injuries	182
	References	189
4	Applicability of the DSHO Method in Work with Pigments of Plants and Animals	197
4.1	Derived Spectra of High Orders for Some Carotenoids	204
4.2	Neoxanthin as a Probable Key Product of Formation of α - and β -Carotenoid Derivatives	213
4.3	Metabolic Transformations of Labeled ^{14}C - or ^3H -Carotene in Animal Tissues	219

4.4 Importance of Derivative Spectrophotometry for Study of Alternative Ways of Carotenoids Biosynthesis in Procaryota and Eucaryota	223
4.5 Possibility of Participation of α -Ketoglutaric Acid Funds in Carotenoids Biosynthesis in Chloroplasts	232
4.6 Malic Acid as the Source for Carotenoids Synthesis in Plants with C4-Way of Carbon in Photosynthesis	237
4.7 Indication of the De-epoxidation Reaction with the Help of Derived Spectra	244
4.7.1 Coupling of the De-epoxidation Reaction of Xanthophylls with Change of D ^{II} Spectra at $\lambda = 460\text{--}470\text{ nm}$	244
4.7.2 Capabilities of Derivative Spectrophotometry for Assessment of the Influence of Poisons and Herbicides as Extreme Factors of the Environment	253
4.7.3 Features of Influence of Photosystem Inhibitors and of Photophosphorylation Uncouplers on Dynamics of Pigment Content	258
4.7.4 The Coupling of Xanthophylls Transformations with Chloroplast Energetics	263
4.7.5 Assessment of Characteristics of Radiation Injuries of the Photosynthetic Apparatus In Vivo with Help of Derived Spectra of High Orders	270
4.7.6 Derivative Spectrophotometry for the Analysis of Pigments of Blood and Its State	284
4.7.7 Possibility of Application of the Method of Differentiation of Spectral Curves to the Decoding of Electrocardiograms for the Analysis of Heart Activity	287
References	289
5 EPR Spectroscopy for Solution of Some Scientific Real-World Problems in Biology, Medicine and Ecology	301
5.1 The Phenomenon of Magnetic Resonance	302
5.2 EPR Phenomenon	306
5.2.1 Induced Electron Quantum Transitions in EPR Phenomenon	306
5.2.2 Hyperfine Electron–Nuclear Interaction in the EPR Method	310
5.2.3 A Stationary Method of Magnetic Resonance Signals Detection	313
5.3 EPR-Dosimetry	317
5.3.1 EPR-Dosimetry of Population	317
5.3.2 EPR-Dosimetry of Objects and Territories	320
5.3.3 “Alanine” Dosimetry	322
5.4 Detection of Paramagnetic Ions in Water Solutions at Room Temperature	322

5.5 EPR of Paramagnetic Ions in Low-Temperature Water-Acidic Matrices	324
5.6 Detection of Impurities Capable of Being Photooxidized, in Water, with the Use of Electron Phototransfer Reaction	327
5.7 Determination of Deuterium Concentration in Water	330
5.8 Multiquantum Processes in Reactions of Photosynthesis and Photosensitization	332
5.9 Resolution of Overlapped Spectra	334
5.10 Small-Sized Specialized EPR Equipment	338
5.11 Measurement of Dielectric Properties of Substances at Frequencies 10 and 30 GHz	342
References	346
6 Conclusion	349
Index	353
