THEMES

Evolution and Cell Physiology. 3. Using *Dictyostelium discoideum* to investigate mechanisms of epithelial polarity

W. I. Weis, W. J. Nelson, and D. J. Dickinson

C1091

EDITORIAL FOCUS

Understanding the cellular mechanism for inhaled hyperosmotic saline therapy for patients with cystic fibrosis. Focus on "Effect of apical hyperosmotic sodium challenge and amiloride on sodium transport in human bronchial epithelial cells from cystic fibrosis donors"

C. M. Liedtke

C1096

CALL FOR PAPERS

Cellular Mechanisms of Tissue Fibrosis

Type-1 pericytes participate in fibrous tissue deposition in aged skeletal muscle

A. Birbrair, T. Zhang, Z.-M. Wang, M. L. Messi, A. Mintz, and O. Delbono

C1098

Effect of apical hyperosmotic sodium challenge and amiloride on sodium transport in human bronchial epithelial cells from cystic fibrosis donors

H. Rasgado-Flores, V. K. Mandava, H. Siman, W. Van Driessche, J. M. Pilewski, S. H. Randell, and R. J. Bridges

C1114

N-methyl-D-aspartate receptors in human erythroid precursor cells and in circulating red blood cells contribute to the intracellular calcium regulation

A. Makhro, P. Hänggi, J. S. Goede, J. Wang, A. Brüggemann, M. Gassmann, M. Schmugge, L. Kaestner, O. Speer, and A. Bogdanova

C1123

Cell surface F_1/F_0 ATP synthase contributes to interstitial flow-mediated development of the acidic microenvironment in tumor tissues

Y. Kawai, M. Kaidoh, Y. Yokoyama, and T. Ohhashi

C1139

Time-dependent modulation of GABA_A-ergic synaptic transmission by allopregnanolone in locus coeruleus neurons of *Mecp2*-null mice

X. Jin, W. Zhong, and C. Jiang

C1151

Calmodulin-dependent binding to the NHE1 cytosolic tail mediates activation of the Na^+/H^+ exchanger by Ca^{2+} and endothelin

X. Li, D. Prins, M. Michalak, and L. Fliegel

C1161

(Continued)

(Contents continued)

Cyp1B1 expression promotes angiogenesis by suppressing NF- κ B activity <i>T. L. Palenski, Z. Gurel, C. M. Sorenson, K. D. Hankenson, and N. Sheibani</i>	C1170
Enterotoxigenic <i>Escherichia coli</i> infection and intestinal thiamin uptake: studies with intestinal epithelial Caco-2 monolayers <i>A. Ghosal, N. S. Chatterjee, T. Chou, and H. M. Said</i>	C1185
