ARTICLES

White, P. J., George, T. S., Gregory, P. J., Bengough, A. G., Hallett, P. D. and McKenzie, B. M. Matching roots to their environment	207
Seago, J. L. Jr and Fernando, D. D. Anatomical aspects of angiosperm root evolution	223
Shishkova, S., Las Peñas, M. L., Napsucialy-Mendivil, S., Matvienko, M., Kozik, A., Montiel, J., Patiño, A. and Dubrovsky, J. G. Determinate primary root growth as an adaptation to aridity in Cactaceae: towards an understanding of the evolution and genetic control of the trait	239
Faget, M., Nagel, K. A., Walter, A., Herrera, J. M., Jahnke, S., Schurr, U. and Temperton, V. M. Root–root interactions: extending our perspective to be more inclusive of the range of theories in ecology and agriculture using <i>in-vivo</i> analyses	253
Blossfeld, S., Schreiber, C. M., Liebsch, G., Kuhn, A. J. and Hinsinger, P. Quantitative imaging of rhizosphere pH and CO ₂ dynamics with planar optodes	267
Carminati, A. and Vetterlein, D. Plasticity of rhizosphere hydraulic properties as a key for efficient utilization of scarce resources	277
Eshel, A. and Grünzweig, J. M. Root–shoot allometry of tropical forest trees determined in a large-scale aeroponic system	291
Subbarao, G. V., Sahrawat, K. L., Nakahara, K., Rao, I. M., Ishitani, M., Hash, C. T., Kishii, M., Bonnett, D. G., Berry, W. L. and Lata, J. C. A paradigm shift towards low-nitrifying production systems: the role of biological nitrification inhibition (BNI)	297
Brown, L. K., George, T. S., Dupuy, L. X. and White, P. J. A conceptual model of root hair ideotypes for future agricultural environments: what combination of traits should be targeted to cope with limited P availability?	317
Rose, T. J., Impa, S. M., Rose, M. T., Pariasca-Tanaka, J., Mori, A., Heuer, S., Johnson-Beebout, S. E. and Wissuwa, M. Enhancing phosphorus and zinc acquisition efficiency in rice: a critical review of root traits and their potential utility in rice breeding	331
Lynch, J. P. Steep, cheap and deep: an ideotype to optimize water and N acquisition by maize root systems	347

Contents from back cover

Botwright Acuña, T. L. and Wade, L. J. Use of genotype × environment interactions to understand rooting depth and the ability of wheat to penetrate hard soils	359
Claus, J., Bohmann, A. and Chavarria-Krauser, A. Zinc uptake and radial transport in roots of <i>Arabidopsis thaliana</i> : a modelling approach to understand accumulation	369
Shi, L., Shi, T., Broadley, M. R., White, P. J., Long, Y., Meng, J., Xu, F. and Hammond, J. P. High-throughput root phenotyping screens identify genetic loci associated with root architectural traits in <i>Brassica napus</i> under contrasting phosphate availabilities	381
Niu, Y. F., Chai, R. S., Jin, G. L., Wang, H., Tang, C. X. and Zhang, Y. S. Responses of root architecture development to low phosphorus availability: a review	391
Koltai, H. Strigolactones activate different hormonal pathways for regulation of root development in response to phosphate growth conditions	409
Husakova, E., Hochholdinger, F. and Soukup, A. Lateral root development in the maize (<i>Zea mays</i>) <i>lateral rootless1</i> mutant	417
Jaramillo, R. E., Nord, E. A., Chimungu, J. G., Brown, K. M. and Lynch, J. P. Root cortical burden influences drought tolerance in maize	429
Rostamza, M., Richards, R. A. and Watt, M. Response of millet and sorghum to a varying water supply around the primary and nodal roots	439
Watt, M., Moosavi, S., Cunningham, S. C., Kirkegaard, J. A., Rebetzke, G. J. and Richards, R. A. A rapid, controlled-environment seedling root screen for wheat correlates well with rooting depths at vegetative, but not reproductive, stages at two field sites	447
Dietrich, R. C., Bengough, A. G., Jones, H. G. and White, P. J. Can root electrical capacitance be used to predict root mass in soil?	457
