BIOGEOCHEMISTRY LETTERS

Plant rhizosphere influence on microbial C metabolism: the role of elevated CO₂, N availability and root stoichiometry

Y. Carrillo · F.A. Dijkstra · E. Pendall · D. LeCain · C. Tucker 229

SYNTHESIS AND EMERGING IDEAS

Mycorrhizal associations of dominant trees influence nitrate leaching responses to N deposition

M.G. Midgley · R.P. Phillips 241

Lack of steady-state in the global biogeochemical Si cycle: emerging evidence from lake Si sequestration

P.J. Frings · W. Clymans · E. Jeppesen · T.L. Lauridsen · E. Struyf · D.J. Conley 255

Paradigm shifts in soil organic matter research affect interpretations of aquatic carbon cycling: transcending disciplinary and ecosystem boundaries

E. Marin-Spiotta · K.E. Gruley · J. Crawford · E.E. Atkinson · J.R. Miesel · S. Greene · C. Cardona-Correa · R.G.M. Spencer 279

ORIGINAL PAPERS

Thermo-erosion gullies increase nitrogen available for hydrologic export

T.K. Harms · B.W. Abbott · J.B. Jones 299

Nanoscale structure of organic matter could explain litter decomposition

G. Papa · B. Scaglia · A. Schievano · F. Adani 313

Substrate limitation of sediment methane flux, methane oxidation and use of stable isotopes for assessing methanogenesis pathways in a small arctic lake

A.E. Hershey · R.M. Northington · S.C. Whalen 325

Nitrogen input quality changes the biochemical composition of soil organic matter stabilized in the fine fraction: a long-term study

A.W. Gillespie · A. Diochon · B.L. Ma · M.J. Morrison · L. Kellman · F.L. Walley · T.Z. Regier · D. Chevrier · J.J. Dynes · E.G. Gregorich 337

Is the high ¹⁵N natural abundance of trees in N-loaded forests caused by an internal ecosystem N isotope redistribution or a change in the ecosystem N isotope mass balance?

P. Högberg · C. Johannisson · M.N. Högberg 351

Direct flux and ¹⁵N tracer methods for measuring denitrification in forest soils

M.V. Kulkarni · A.J. Burgin · P.M. Groffman · J.B. Yavitt 359

Sulphate reduction and calcite precipitation in relation to internal eutrophication of groundwater fed alkaline fens

D.G. Cirkel · C.G.E.M. Van Beek · J.P.M. Witte · S.E.A.T.M. Van der Zee 375

Experimental summer drought reduces soil CO₂ effluxes and DOC leaching in Swiss grassland soils along an elevational gradient

F. Hagedorn · O. Joos 395

Thawing glacial and permafrost features contribute to nitrogen export from Green Lakes Valley, Colorado Front Range, USA

R.T. Barnes · M.W. Williams · J.N. Parman · K. Hill · N. Caine 413

The effect of nitrogen addition on soil organic matter dynamics: a model analysis of the Harvard Forest Chronic Nitrogen Amendment Study and soil carbon response to anthropogenic N deposition

C. Tonitto · C.L. Goodale · M.S. Weiss · S.D. Frey · S.V. Ollinger 431

On the importance of quantifying bioavailable nitrogen instead of total nitrogen

L. Jørgensen · S. Markager · M. Maar 455

Using microbial communities and extracellular enzymes to link soil organic matter characteristics to greenhouse gas production in a tidal freshwater wetland

E.M. Morrissey · D.J. Berrier · S.C. Neubauer · R.B. Franklin 473

Interpreting spatial patterns in redox and coupled water–nitrogen fluxes in the streambed of a gaining river reach

C. Heppell · A. Louise Heathwaite · A. Binley · P. Byrne · S. Ullah · K. Lansdown · P. Keenan · M. Trimmer · H. Zhang 491

Benthic primary production and nitrogen cycling in *Spartina alterniflora* marshes: effect of restoration after acute dieback

P. Baas · M.W. Hester · S.B. Joye 511

Different temperature sensitivity and kinetics of soil enzymes indicate seasonal shifts in C, N and P nutrient stoichiometry in acid forest soil

J. Bárta · P. Šlajsová · K. Tahovská · T. Píček · H. Šantrůčková 525

Dissolved oxygen and dissolved inorganic carbon stable isotope composition and concentration fluxes across several shallow floodplain aquifers and in a diffusion experiment

S.R. Parker · M.N. Darvis · S.R. Poulson · C.H. Gammons · J.A. Stanford 539

2013 OUTSTANDING REVIEWERS

2013 Outstanding reviewers 553

Cover Image: Individual study effect sizes and corresponding confidence intervals ($n = 45$). Polygon denotes grand mean effect size based on random effects model with outer edges of the polygon indicating the confidence interval limits. Open squares AM sites, closed squares ECM sites.
