Effects of the regulation in phosphate salt, soybean meal and ammonium sulfate on PMV (a), viscosity (b), glucose feed rate (c), ammonium nitrogen (d), OUR (e) and erythromycin concentration (f). High ammonium sulfate medium, strategy 1, adding potassium dihydrogen phosphate (0.2 g/L). Strategy 2, reducing soybean meal from 30 to 20 g/L. strategy 3, decreasing ammonium sulfate from 8 to 6 g/L. See the article "Significant decrease of broth viscosity and glucose consumption in erythromycin fermentation by dynamic regulation of ammonium sulfate and phosphate" by Y. Chen et al.
