	ARTICLES	ARTICLES
Karl-Anders Högberg, Henrik R. Hallingbäck, Harald Säll, Marie Johansson, and Gunnar Jansson	273–280	The potential for the genetic improvement of sawn timber traits in <i>Picea abies</i>
Pontus M.F. Lindgren and Thomas P. Sullivan	281–289	Response of forage yield and quality to thinning and fertilization of young forests: implications for silvopasture management
Liina Häyrynen, Osmo Mattila, Sami Berghäll, and Anne Toppinen	290–300	Changing objectives of non-industrial private forest ownership: a confirmatory approach to measurement model testing
Yvette Dickinson, Eric K. Zenner, and Douglas Miller	301–312	Examining the effect of diverse management strategies on landscape scale patterns of forest structure in Pennsylvania using novel remote sensing techniques
Dave M. Morris, Martin M. Kwiaton, and Dan R. Duckert	313–325	Black spruce growth response to varying levels of biomass harvest intensity across a range of soil types: 15-year results
Qingzhang Du, Baohua Xu, Chenrui Gong, Xiaohui Yang, Wei Pan, Jiaxing Tian, Bailian Li, and Deqiang Zhang	326–339	Variation in growth, leaf, and wood property traits of Chinese white poplar (<i>Populus tomentosa</i>), a major industrial tree species in Northern China

Continued on inside back cover / Suite au verso

Front cover: Deadwood and cardinal flower in a riparian zone located within an unharvested control area of the University of Maine's Acadian Forest Ecosystem Research Program (AFERP) experiment. The AFERP is situated in the Penobscot Experimental Forest in central Maine, USA. Image supplied by Dr. Matthew Olson, Missouri Department of Conservation.

Page couverture : « Bois mort et lobélie du cardinal dans une zone riveraine située dans une région témoin non exploitée faisant partie de l'expérience de l'Acadian Forest Ecosystem Research Program (AFERP) de l'Université du Maine. L'AFERP se situe dans la forêt expérimentale de Penobscot, dans le centre du Maine (É.-U.). Image fournie par Matthew Olson, Ph.D., Department of Conservation du Missouri. »

A. Mosseler, J.E. Major, and M. Labrecque	340–349	Growth and survival of seven native willow species on highly disturbed coal mine sites in eastern Canada
Melissa Thomas-Van Gundy, James Rentch, Mary Beth Adams, and Walter Carson	350–364	Reversing legacy effects in the understory of an oak-dominated forest
Yan Boulanger, Sylvie Gauthier, and Philip J. Burton	365–376	A refinement of models projecting future Canadian fire regimes using homogeneous fire regime zones
Steen Magnussen	377–382	Robust fixed-count density estimation with virtual plots
	NOTE	NOTE
Daniel Mandallaz	383–388	A three-phase sampling extension of the generalized regression estimator with partially exhaustive information
	CORRIGENDUM	RECTIFICATIF
B. Bond-Lamberty, C. Wang, and S.T. Gower	389	Corrigendum: Aboveground and belowground biomass and sapwood area allometric equations for six boreal tree species of northern Manitoba
