	REVIEW	SYNTHÈSE
	535–553	Simulating ectomycorrhizal fungi and their role in carbon and nitrogen cycling in forest ecosystems
G. Deckmyn, A. Meyer, M.M. Smits, A. Ekblad, T. Grebenc, A. Komarov, and H. Kraigher		
	ARTICLES	ARTICLES
	554–561	Ethanol accumulation during severe drought may signal tree vulnerability to detection and attack by bark beetles
Rick G. Kelsey, D. Gallego, F.J. Sánchez-García, and J.A. Pajares		
	562–571	Understory plant assemblages present distinct short-term responses to the clear-cutting of an old-growth spruce forest near an alpine timberline
Xin Liu and W.K. Bao		
	572–581	Change detection of storm runoff and sediment yield using hydrologic models following wildfire in a coastal redwood forest, California
Christopher G. Surfleet, Brian Dietterick, and Arne Skaugset		
	582–592	Genetic parameters and genotype–environment interactions of Chinese fir (<i>Cunninghamia lanceolata</i>) in Fujian Province
Liming Bian, Jisen Shi, Renhua Zheng, Jinhui Chen, and Harry X. Wu		
	593–603	Mixed-severity fire in lodgepole pine dominated forests: are historical regimes sustainable on Oregon’s Pumice Plateau, USA?
Emily K. Heyerdahl, Rachel A. Loehman, and Donald A. Falk		

Continued on inside back cover / Suite au verso

Front cover: Deadwood and cardinal flower in a riparian zone located within an unharvested control area of the University of Maine’s Acadian Forest Ecosystem Research Program (AFERP) experiment. The AFERP is situated in the Penobscot Experimental Forest in central Maine, USA. Image supplied by Dr. Matthew Olson, Missouri Department of Conservation.

Page couverture : « Bois mort et lobélie du cardinal dans une zone riveraine située dans une région témoin non exploitée faisant partie de l’expérience de l’Acadian Forest Ecosystem Research Program (AFERP) de l’Université du Maine. L’AFERP se situe dans la forêt expérimentale de Penobscot, dans le centre du Maine (É.-U.). Image fournie par Matthew Olson, Ph.D., Department of Conservation du Missouri. »

Justin M. Becknell and Jennifer S. Powers	604–613	Stand age and soils as drivers of plant functional traits and aboveground biomass in secondary tropical dry forest
Emily T. Russell-Roy, William S. Keeton, Jennifer A. Pontius, and Charles D. Kerchner	614–627	Rehabilitation forestry and carbon market access on high-graded northern hardwood forests
Les W. Gyug, Robert J. Higgins, Melissa A. Todd, Jeff M. Meggs, and B. Staffan Lindgren	628–637	Dietary dependence of Williamson’s Sapsucker nestlings on ants associated with dead and decaying wood in British Columbia
David Auty, Alexis Achim, Pierre Bédard, and David Pothier	638–647	StatSAW: modelling lumber product assortment using zero-inflated Poisson regression
Sergio de-Miguel, Lauri Mehtätalo, and Ali Durkaya	648–656	Developing generalized, calibratable, mixed-effects meta-models for large-scale biomass prediction
Boy J.H.M. Possen, Mikko J. Anttonen, Elina Oksanen, Matti Rousi, Jaakko Heinonen, Katri Kostiainen, Sari Kontunen-Soppela, Juha Heiskanen, and Elina M. Vapaavuori	657–665	Variation in 13 leaf morphological and physiological traits within a silver birch (<i>Betula pendula</i>) stand and their relation to growth
Rasmus Astrup, Mark J. Ducey, Aksel Granhus, Tim Ritter, and Nikolas von Lüpke	666–676	Approaches for estimating stand-level volume using terrestrial laser scanning in a single-scan mode
	NOTE	NOTE
James A. Lutz, Kaitlyn A. Schwindt, Tucker J. Furniss, James A. Freund, Mark E. Swanson, Katie I. Hogan, Gillian E. Kenagy, and Andrew J. Larson	677–683	Community composition and allometry of <i>Leucothoe davisiae</i> , <i>Cornus sericea</i> , and <i>Chrysolepis sempervirens</i>
