A photograph of a forest stream with a fallen log and red flowers. The stream flows over rocks, creating white water. The surrounding forest is lush with green ferns and trees. A large fallen log lies across the stream, partially covered in moss. Red flowers are visible on the right bank.

ARTICLES

Jens T. Stevens, Hugh D. Safford,
and Andrew M. Latimer

843–854

Wildfire-contingent effects of fuel treatments can promote ecological resilience in seasonally dry conifer forests

Charles B. Halpern, Martin Dovčiak,
Lauren S. Urgenson, and Shelley A. Evans

855–866

Substrates mediate responses of forest bryophytes to a gradient in overstory retention

Carolyn Reid and Shaun A. Watmough

867–885

Evaluating the effects of liming and wood-ash treatment on forest ecosystems through systematic meta-analysis

Renke Coordes

886–891

Concerning the relevant domain of the Faustmann model

Piermaria Corona, Gherardo Chirici,
Sara Franceschi, Daniela Maffei,
Marzia Marcheselli, Caterina Pisani,
and Lorenzo Fattorini

892–902

Design-based treatment of missing data in forest inventories using canopy heights from aerial laser scanning

Jordan Benner, Ken Lertzman,
and Evelyn W. Pinkerton

903–913

Social contracts and community forestry: how can we design forest policies and tenure arrangements to generate local benefits?

J.E. Korb, S. Bombaci, and R. Siegel

914–921

The effect of sudden aspen decline on understory microclimate and vegetation in southwestern Colorado

Continued on inside back cover / Suite au verso

Front cover: Deadwood and cardinal flower in a riparian zone located within an unharvested control area of the University of Maine's Acadian Forest Ecosystem Research Program (AFERP) experiment. The AFERP is situated in the Penobscot Experimental Forest in central Maine, USA. Image supplied by Dr. Matthew Olson, Missouri Department of Conservation.

Page couverture : « Bois mort et lobélie du cardinal dans une zone riveraine située dans une région témoin non exploitée faisant partie de l'expérience de l'Acadian Forest Ecosystem Research Program (AFERP) de l'Université du Maine. L'AFERP se situe dans la forêt expérimentale de Penobscot, dans le centre du Maine (É.-U.). Image fournie par Matthew Olson, Ph.D., Department of Conservation du Missouri. »
