ON THE COVER: Upon employing a novel strategy using spark plasma sintering technique, the grains of bulk polycrystalline Pr-doped SrTiO_3 ceramics were enhanced with Pr-rich grain boundaries which improved their thermoelectric properties. Specifically, this morphology resulted in a significant improvement in carrier mobility and the thermoelectric power factor in this broadly functional oxide material. Cover image designed by Ryan Newman. For more information, see "Large Thermoelectric Power Factor in Pr-Doped $\text{SrTiO}_{3-\delta}$ Ceramics via Grain-Boundary-Induced Mobility Enhancement" by Arash Mehdizadeh Dehkordi,* Sriparna Bhattacharya, Taghi Darroudi, Jennifer W. Graff, Udo Schwingenschlögl, Husam N. Alshareef, and Terry M. Tritt* (*Chem. Mater.* 2014, 26, 2478–2485).
