**ON THE COVER:** Hybrid materials based on magnetic iron oxide nanoparticles with attached noble metals (gold, silver) exhibit a huge potential not only in sensing applications but also in the fields of magnetically separable catalysts, magnetically assisted SERS, or separation/detection of various biological substances. This cover features a schematic representation of magnetic nanosensors based on iron oxide (background) and gold nanoclusters (yellow) for sensing of DNA as the model biomolecule. For more information, see “Nanocrystalline Iron Oxides, Composites, and Related Materials as a Platform for Electrochemical, Magnetic, and Chemical Biosensors” by Veronika Urbanova, Massimiliano Magro, Aharon Gedanken, Davide Baratella, Fabio Vianello,\* and Radek Zboril\* (*Chem. Mater.* 2014, 26, 6653–6673).
