

Computational Mechanics

Editor-in-Chief:
P. Wriggers

Editors:
W.K. Liu
T.E. Tezduyar
T.I. Zohdi

 Springer

Computational Mechanics

Solids, Fluids, Structures, Fluid-Structure Interactions, Biomechanics, Micromechanics,
Multiscale Mechanics, Materials, Constitutive Modeling, Nonlinear Mechanics, Aerodynamics

Volume 52 · Number 4 · October 2013

ORIGINAL PAPERS

Local enrichment of the finite cell method for problems with material interfaces

M. Joulaian · A. Düster 741

Meshless analysis of shear deformable shells: the linear model

J.C. Costa · C.M. Tiago · P.M. Pimenta 763

Towards the stabilization of the low density elements in topology optimization with large deformation

R.D. Lahuerta · E.T. Simões · E.M.B. Campello · P.M. Pimenta · E.C.N. Silva 779

Fatigue crack growth simulations of interfacial cracks in bi-layered FGMs using XFEM

S. Bhattacharya · I.V. Singh · B.K. Mishra · T.Q. Bui 799

A new boundary element formulation for wave load analysis

O.F. Yalcin · Y. Mengi 815

Patch based recovery in finite element elastoplastic analysis

F. Daghia · S. de Miranda · F. Ubertini 827

A finite element method for contact using a third medium

P. Wriggers · J. Schröder · A. Schwarz 837

On the dynamics of uncertain coupled structures through a wave based method in mid- and high-frequency ranges

M.A. Ben Souf · M.N. Ichchou · O. Bareille · M. Haddar 849

Real-time validation of mechanical models coupling PGD and constitutive relation error

R. Bouclier · F. Louf · L. Chamoin 861

Restraining approach for the spurious kinematic modes in hybrid equilibrium element

F. Parrinello 885

Efficiency improvement of the frequency-domain BEM for rapid transient elastodynamic analysis

J. Xiao · W. Ye · L. Wen 903

A NURBS enhanced extended finite element approach for unfitted CAD analysis

G. Legrain 913

Initially rigid cohesive laws and fracture based on edge rotations

P. Areias · T. Rabczuk · P.P. Camanho 931

Finite element simulation of phase field model for nanoscale martensitic transformation

H. She · Y. Liu · B. Wang · D. Ma 949

At least three invariants are necessary to model the mechanical response of incompressible, transversely isotropic materials

M. Destrade · B.M. Donald · J.G. Murphy · G. Saccomandi 959
