COMPUTATIONAL FLUID AND SOLID MECHANICS 2013

K.J. Bathe, editor

Proceedings
Seventh MIT Conference on
Computational Fluid and Solid Mechanics
June 12-14, 2013

An International Journal

Computers & Structures

v. 122

Editors

K. J. Bathe

SPECIAL ISSUE

Computational Fluid and Solid Mechanics 2013

K. J. Bathe	1	Preface
T. Sussman and K. J. Bathe	2	3D-shell elements for structures in large strains
M. Latorre and F. J. Montáns	13	Extension of the Sussman–Bathe spline-based hyperelastic model to incompressible transversely isotropic materials
J. Geiser	27	Multiscale methods for levitron problems: Theory and applications
M. A. Beauregard and Q. Sheng	33	Solving degenerate quenching-combustion equations by an adaptive splitting method on evolving grids
T. E. Shurtz and S. L. Thomson	44	<i>Influence of numerical model decisions on the flow-induced vibration of a computational vocal fold model</i>
A. Vanaerschot, B. N. Cox, S. V. Lomov and D. Vandepitte	55	Stochastic multi-scale modelling of textile composites based on internal geometry variability
L. Caracoglia	65	An Euler–Monte Carlo algorithm assessing Moment Lyapunov Exponents for stochastic bridge flutter predictions
D. Tang, C. Yang, T. Geva, R. Rathod, H. Yamauchi, V. Gooty, A. Tang, M. H. Kural, K. L. Billiar, G. Gaudette and P. J. del Nido	78	<i>A multiphysics modeling approach to develop right ventricle pulmonary valve replacement surgical procedures with a contracting band to improve ventricle ejection fraction</i>
E. Hachem, S. Feghali, R. Codina and T. Coupez	88	Anisotropic adaptive meshing and monolithic Variational Multiscale method for fluid–structure interaction
T. Engels, D. Kolomenskiy, K. Schneider and J. Sesterhenn	101	Two-dimensional simulation of the fluttering instability using a pseudospectral method with volume penalization
A. Corigliano, M. Dossi and S. Mariani	113	Domain decomposition and model order reduction methods applied to the simulation of multi-physics problems in MEMS
J. Tan, S. Wang, J. Yang and Y. Liu	128	<i>Coupled particulate and continuum model for nanoparticle targeted delivery</i>
H. Keyhan, G. McClure and W. G. Habashi	135	Dynamic analysis of an overhead transmission line subject to gusty wind loading predicted by wind–conductor interaction
H. E. Salman, C. Sert and Y. Yazicioglu	145	Computational analysis of high frequency fluid–structure interactions in constricted flow
R. Bourguet, G. E. Karniadakis and M. S. Triantafyllou	155	Phasing mechanisms between the in-line and cross-flow vortex-induced vibrations of a long tensioned beam in shear flow
K. Kupwade-Patil, F. Soto, A. Kunjumon, E. N. Allouche and D. S. Mainardi	164	Multi-scale modeling and experimental investigations of geopolymeric gels at elevated temperatures
A. Siddens and J. Bayandor	178	Multidisciplinary impact damage prognosis methodology for hybrid structural propulsion systems
Y. Modarres-Sadeghi and M. P. Païdoussis	192	Chaotic oscillations of long pipes conveying fluid in the presence of a large end-mass
T. Sucipto, M. Berci and J. Krier	202	Gust response of a flexible typical section via high- and (tuned) low-fidelity simulations
G. Muscolino, A. Sofi and M. Zingales	217	One-dimensional heterogeneous solids with uncertain elastic modulus in presence of long-range interactions: Interval versus stochastic analysis
M. Paggi, G. Ferro and F. Braga	230	A multiscale approach for the seismic analysis of concrete gravity dams
E. Lushi and C. S. Peskin	239	Modeling and simulation of active suspensions containing large numbers of interacting micro-swimmers
Z. Li and P. Song	249	Adaptive mesh refinement techniques for the immersed interface method applied to flow problems
Y. Kim and Y. Seol	259	Numerical simulations of two-dimensional wet foam by the immersed boundary method
C. G. Koh, M. Luo, M. Gao and W. Bai	270	Modelling of liquid sloshing with constrained floating baffle
