Special Issue: Tropical Forest Responses to Large-scale Experimental Hurricane Effects

Understanding the key mechanisms of tropical forest responses to canopy loss and biomass deposition from experimental hurricane effects	
A.B. Shiels (Hilo, USA) and G. González (Río Piedras, USA)	1
Effects of canopy opening and debris deposition on fungal connectivity, phosphorus movement between litter cohorts and mass loss	
D.J. Lodge (Luquillo, USA), S.A. Cantrell (Gurabo, USA) and G. González (Río Piedras, USA)	11
Effects of a simulated hurricane disturbance on forest floor microbial communities	
S.A. Cantrell (Gurabo, USA), M. Molina (Athens, USA), D. Jean Lodge (Luquillo, USA), F.J. Rivera-Figueroa, M.L. Ortiz-Hernández (Gurabo, USA), A.A. Marchetti (Brazil), M.J. Cyterski (Athens, USA) and J.R. Pérez-Jiménez (Gurabo, USA)	22
A canopy trimming experiment in Puerto Rico: The response of litter decomposition and nutrient release to canopy opening and debris deposition in a subtropical wet forest	
G. González (Río Piedras, Puerto Rico), D.J. Lodge (Luquillo, Puerto Rico), B.A. Richardson and M.J. Richardson (Edinburgh, UK)	32
Differential effects of canopy trimming and litter deposition on litterfall and nutrient dynamics in a wet subtropical forest	
W.L. Silver (Berkeley, USA), S.J. Hall (Salt Lake City, USA) and G. González (Río Piedras, USA)	47
Linking soils and streams: Response of soil solution chemistry to simulated hurricane disturbance mirrors stream chemistry following a severe hurricane	
W.H. McDowell and D. Liptzin (Durham, USA)	56
Seven-year responses of trees to experimental hurricane effects in a tropical rainforest, Puerto Rico	
J.K. Zimmerman, J.A. Hogan, A.B. Shiels, J.E. Bithorn, S.M. Carmona and N. Brokaw (Río Piedras, USA)	64
Understory fern community structure, growth and spore production responses to a large-scale hurricane experiment in a Puerto Rico rainforest	
J.M. Sharpe (Edgecomb, USA) and A.B. Shiels (Hilo, USA)	75
Divergent responses of leaf herbivory to simulated hurricane effects in a rainforest understory	
C. Prather (Houston, USA)	87
Canopy arthropod responses to experimental canopy opening and debris deposition in a tropical rainforest subject to hurricanes	
T.D. Schowalter (Baton Rouge, USA), M.R. Willig and S.J. Presley (Storrs, USA)	93
Experimental decoupling of canopy opening and debris addition on tropical gastropod populations and communities	
M.R. Willig (Storrs, USA), C.P. Bloch (Bridgewater, USA) and S.J. Presley (Storrs, USA)	103
Coqui frog populations are negatively affected by canopy opening but not detritus deposition following an experimental hurricane in a tropical rainforest	
P.D. Klawinski, B. Dalton (Liberty, USA) and A.B. Shiels (Hilo, USA)	118
Responses to canopy loss and debris deposition in a tropical forest ecosystem: Synthesis from an experimental manipulation simulating effects of hurricane disturbance	
A.B. Shiels (Hilo, USA), G. González (Río Piedras, USA) and M.R. Willig (Storrs, USA)	124
Frederick N. Scatena: A tropical geomorphologist	
A.E. Lugo (Río Piedras, Puerto Rico)	134
