Calculated  $z$ -component of the magnetic field intensities for a three dimensional PCSEL unit cell with an air hole filling factor of 0.49. (a) and (b) show the top-views and side-views of TE<sub>0</sub> mode and TE<sub>4</sub> mode for  $K$ -vector located at point. Similarly, (c) and (d) are those spatial views of TE<sub>0</sub> and TE<sub>4</sub> modes for  $K$ -vector is equal to  $0.15 \pi/a$ . (HONG *et al*, Article #6400205).
