## Security Smorgasbord

This special issue of *IEEE Security & Privacy* covers a wide range of exciting topics. First, we focus on changes necessary to keep pace with new technologies. We examine biometrics as an identity verification method in airports, the benefits and repercussions of collecting privacy-sensitive data in the gaming world, and new security implications for moving software-defined network architecture into the mobile arena. Then we get organized, classifying domain-generation algorithm malware and near-field communication techniques. Finally, we highlight vVote, a verifiable secret voting method for blind and remote users, which found much success in Australian elections.

- 12 The Public Security and Personal Privacy Survey: Biometric Technology in Hong Kong**  
Qing-Yun Li and Lei Zhang
- 22 Incorporating Privacy into Digital Platform Design: The What, Why, and How**  
Jussi Laakkonen, Janne Parkkila, Pekka Jäppinen, Jouni Ikonen, and Ahmed Seffah
- 34 Opportunities and Challenges of Software-Defined Mobile Networks in Network Security**  
Madhusanka Liyanage, Ahmed Bux Abro, Mika Ylianttila, and Andrei Gurtov
- 46 A Taxonomy of Domain-Generation Algorithms**  
Aditya K. Sood and Sherali Zeadally
- 54 A Review of Technical Approaches to Realizing Near-Field Communication Mobile Payments**  
Diego A. Ortiz-Yepes
- 64 vVote: Verifiable Electronic Voting in Practice**  
Craig Burton, Chris Culnane, and Steve Schneider
