Magnetic moments configuration for hollow spheres with $\epsilon = 0.1$ for (a) 0.168 and (b) 0.308 ns. We can see the vortex and onion structures propagating from the outside until the inside of the array. The propagation occurs along the applied field. From the paper, "Micromagnetic Simulation in Hexagonal Arrays of Nanosized Hollow Nickel Spheres," by Y. Guerra *et al.*, Art. no. 7100706.
