

International Journal of Applied Mathematics and Computer Science

Number 1 - March 2015

Volume 25 - 2015

- Robust quasi-LPV model reference FTC of a quadrotor UAV subject to actuator faults
Damiano Rotondo, Fatiha Nejjari, Vicenç Puig
- Model-based techniques for virtual sensing of longitudinal flight parameters
Georges Hardier, Cédric Seren, Pierre Ezerzere
- A safe supervisory flight control scheme in the presence of constraints and anomalies
Giuseppe Franzè, Angelo Furfaro, Massimiliano Mattei, Valerio Scordamaglia
- Detection and identification of loss of efficiency faults of flight actuators
Daniel Ossmann, Andreas Varga
- A Hamiltonian approach to fault isolation in a planar vertical take-off and landing aircraft model
Luis H. Rodriguez-Alfaro, Efrain Alcorta-Garcia, David Lara, Gerardo Romero
- Increasing pursuer capturability by using hybrid dynamics
Valery Y. Glizer, Vladimir Turetsky
- A fault tolerant direct control allocation scheme with integral sliding modes
Mirza Tariq Hamayun, Christopher Edwards, Halim Alwi, Abdulrahman Bajodah
- A probabilistic method for certification of analytically redundant systems
Bin Hu, Peter Seiler
- Supervisory fault tolerant control of the GTM UAV using LPV methods
Tamás Péni, Bálint Vanek, Zoltán Szabó, József Bokor
- Fault tolerant control using Gaussian processes and model predictive control
Xiaoke Yang, Jan M. Maciejowski
- An SFDI observer-based scheme for a general aviation aircraft
Marco Ariola, Massimiliano Mattei, Immacolata Notaro, Federico Corrado, Adolfo Sollazzo
- Systematic fault tolerant control based on adaptive Thau observer estimation for quadrotor UAVs
Zhaohui Cen, Hassan Noura, Younes Al Younes
- Simultaneous state and parameter estimation based actuator fault detection and diagnosis for an unmanned helicopter
Chong Wu, Juntong Qi, Dalei Song, Xin Qi, Jianda Han
- SMAC-FDI: A single model active fault detection and isolation system for unmanned aircraft
Guillaume J.J. Ducard
