

Special Issue on Effective Field Theory in Nuclear Physics; Guest Editors: M. Pavón Valderrama and U. van Kolck

Preface

M. Pavón Valderrama, U. van Kolck

1602001

Matching effective few-nucleon theories to QCD

J. Kirscher

1641001

Three-body systems in pionless effective field theory

Jared Vanasse

1641002

Three-body systems in physics of cold atoms and halo nuclei

Chen Ji

1641003

Radiative reactions in halo effective field theory

Gautam Rupak

1641004

Hypernuclei in halo/cluster effective field theory

Shung-Ichi Ando

1641005

Power counting for nuclear forces in chiral effective field theory

Bingwei Long

1641006

Power counting and Wilsonian renormalization in nuclear effective field theory

Manuel Pavón Valderrama

1641007

Violations of discrete space–time symmetries in chiral effective field theory

J. de Vries, Ulf-G. Meißner

1641008

Uncertainty quantification of effective nuclear interactions

R. Navarro Pérez, J. E. Amaro, E. Ruiz Arriola

1641009

Nuclear lattice simulations and SU(4) symmetry

Dean Lee

1641010

Properties of infrared extrapolations in a harmonic oscillator basis

Sidney A. Coon, Michael K. G. Kruse

1641011
