The effect of small scale on the pull-in instability of nano-switches using DQM

Original Research Article

Pages 1193-1202

T. Mousavi, S. Bornassi, H. Haddadpour

Progressive failure of a unidirectional fiber-reinforced composite using the method of cells: Discretization objective computational results

Original Research Article

Pages 1203-1216

Evan J. Pineda, Brett A. Bednarczyk, Anthony M. Waas, Steven M. Arnold

Predeformation- and frequency-dependent material behaviour of filler-reinforced rubber: Experiments, constitutive modelling and parameter identification

Original Research Article

Pages 1217-1225

D. Wollscheid, A. Lion

Highlights

► Predeformation- and frequency-dependence of filled rubber is experimentally studied. ► Large predeformations are superimposed by small harmonic vibrations. ► Dynamic moduli exhibit a strong dependence on predeformation and frequency. ► A new constitutive approach to describe the dynamic material behaviour is developed. ► Parameter identification is carried out and simulation results are excellent.

Steady-state solutions of a propagating borehole

Original Research Article

Pages 1226-1240

Luc Perneder, Emmanuel Detournay

Discrete approximations of the Föppl–Von Kármán shell model: From coarse to more refined models

Original Research Article

Pages 1241-1252

Stefano Vidoli

Fundamental solutions for isotropic size-dependent couple stress elasticity

Original Research Article

Pages 1253-1265

On the stress–force–fabric relationship for granular materials

Original Research Article

Pages 1285-1302

X. Li, H.-S. Yu

Strain energy change to the insertion of inclusions associated to a thermo-mechanical semi-coupled system

Original Research Article

Pages 1303-1313

S.M. Giusti, A.A. Novotny, J.E. Muñoz Rivera, J.E. Esparta Rodriguez

Highlights

► Topological derivative of a semi-coupled thermo-mechanical system. ► Novel, extremely simple closed formula for the topological sensitivity. ► Full mathematical justifications for the obtained formulas. ► Potential applications to topology design of structural components and thermal actuators.

Experimental real-time tracking and diffusion/mechanics numerical simulation of cavitation in gas-saturated elastomers

Original Research Article

Pages 1314-1324

Julien Jaravel, Sylvie Castagnet, Jean-Claude Grandidier, Mikaël Gueguen

Dislocation simulation of domain switching toughening in ferroelectric ceramics

Original Research Article

Pages 1325-1331

Mechanical modeling of helical structures accounting for translational invariance. Part 1: Static behavior

Original Research Article

Pages 1373-1382

Ahmed Frikha, Patrice Cartraud, Fabien Treysède

Highlights

► Homogenization based on translational invariance is proposed for helical structures. ► We take advantage of translational invariance thanks to twisting coordinates. ► The microscopic problems are 2D and posed on the cross-section. ► The method is validated for axially loaded springs and seven-wire strands.

Mechanical modeling of helical structures accounting for translational invariance. Part 2 : Guided wave propagation under axial loads

Original Research Article

Pages 1383-1393

Fabien Treysède, Ahmed Frikha, Patrice Cartraud

Highlights

► A semi-analytical FE formulation is proposed for axially loaded helical waveguides. ► We take advantage of translational invariance thanks to twisting coordinates. ► The 3D elastodynamic problem is reduced to a 2D model posed on the cross-section. ► The contact area increases with loads and modifies the veering frequency of strands. ► Numerical results are confirmed by experimental data for prestressed strands.

Conservation laws from any conformal transformations and the parameters for a sharp V-notch in plane elasticity

Original Research Article

Pages 1394-1401

Highlights

► Two new independent Lagrangian functions are presented for plane elasticity. ► Conservation integral in Noether's sense includes any conformal transformation. ► A finite value can be obtained due to any conformal transformation. ► Two parameters for a sharp V-notch in Mode I and II problems are presented. ► Two parameters are equivalent to the NSIFs.

Anisotropy-induced broadband stress wave steering in periodic lattices

Original Research Article

Pages 1402-1414

F. Casadei, J.J. Rimoli

Hyperbolic heat conduction and associated transient thermal fracture for a piezoelectric material layer

Original Research Article

Pages 1415-1424

B.L. Wang, J.E. Li

Analysis of the effects of magnetic field on the induced stress in drilled plates

Original Research Article

Pages 1425-1436

G. Barbaraci, G. Marannano, G. Virzìmariotti

Highlights

► Experimental verification of the presence of induced stress in a drilled plate of steel by the magnetic field. ► Theoretical determination and magnetic and structural FEM analysis, with experimental determination of permeability curve. ► Determination, by FEM; of the better position of the coils to increase compressive stress around the hole. ► Simulation of the crack growth by FEM to verify the improvement of the strength plate when subjected to tensile static load.

Integral identities for a semi-infinite interfacial crack in anisotropic elastic bimetals

Original Research Article

Pages 1437-1448

L. Morini, A. Piccolroaz, G. Mishuris, E. Radi

3D effects on crack front core regions, stress intensity factors and crack initiation angles

Original Research Article

Pages 1449-1459

Shafique M.A. Khan, Nesar Merah, Muhammad J. Adinoyi

Highlights

► The effect of the thickness is explicitly investigated using a mixed mode SENT specimen. ► The reduction in the plastic zone size decreases with decreasing value of the crack inclination angle. ► The

largest variation for SIF is observed at the surface. ► For uniaxial loading, the crack initiation angle at the surface is affected the most.

Static, free vibration and stability analysis of three-dimensional nano-beams by atomistic refined models accounting for surface free energy effect

Original Research Article

Pages 1460-1472

Gaetano Giunta, Yao Koutsawa, Salim Belouettar, Heng Hu

Homogenisation of slender periodic composite structures

Original Research Article

Pages 1473-1481
