COMMUNICATIONS

Communication: From rods to helices: Evidence of a screw-like nematic phase (5 pages)
    Hima Bindu Kolli, Elisa Frazza, Giorgio Cinacchi, Alberto Ferrarini, Achille Giacometti,
    and Toby S. Hudson .......................................................... 081101

Communication: Multireference equation of motion coupled cluster: A transform and diagonalize
    approach to electronic structure (5 pages)
    Marcel Nooljen, Ondřej Demel, Dipayan Datta, Liguo Kong, K. R. Shamasundar, V. Lotrich,
    Lee M. Huntington, and Frank Neese ..................................... 081102

ARTICLES

Theoretical Methods and Algorithms

Rationalization of the Hubbard $U$ parameter in CeO$_x$ from first principles: Unveiling the role of local
structure in screening (7 pages)
    Deyu Lu and Ping Liu .................................................... 084101

A stochastic model for kinesin bidirectional stepping (8 pages)
    Xiaojun Yao (姚晓骏) and Yujun Zheng (郑雨君) ....................... 084102

A bridge-functional-based classical mapping method for predicting the correlation functions
of uniform electron gases at finite temperature (7 pages)
    Yu Liu and Jianzhong Wu .................................................. 084103

Analysis of geometric phase effects in the quantum-classical Liouville formalism (7 pages)
    Ilya G. Ryabinkin, Chang-Yu Hsieh, Raymond Kapral, and Artur F. Izmaylov ............... 084104

Calculation of absorption spectra involving multiple excited states: Approximate methods based
on the mixed quantum classical Liouville equation (10 pages)
    Shuming Bai, Weiwei Xie, Lili Zhu, and Qiang Shi ................. 084105

Implicit solvation model for density-functional study of nanocrystal surfaces and reaction pathways (8 pages)
    Kiran Mathew, Ravishankar Sundararaman, Kendra Letchworth-Weaver, T. A. Arias,
    and Richard G. Hennig .................................................... 084106

Double-hybrid density-functional theory with meta-generalized-gradient approximations (6 pages)
    Sidi M. O. Souvi, Kamal Sharkas, and Julien Toulouse ............ 084107

The relativistic polarization propagator for the calculation of electronic excitations
in heavy systems (10 pages)
    Markus Pernpointner ...................................................... 084108

Recovering position-dependent diffusion from biased molecular dynamics simulations (11 pages)
    Ajasja Ljubetić, Iztok Urbančič, and Janez Štrancar .................. 084109

Monte Carlo simulations for the free energies of C$_{60}$ and C$_{70}$ fullerene crystals by acceptance
ratio method and expanded ensemble method (10 pages)
    Minkyu Kim, Jaehee Chang, and Stanley I. Sandler ................... 084110

(Continued)
Nucleation near the eutectic point in a Potts-lattice gas model (11 pages)
Vishal Agarwal and Baron Peters ................................................. 084111

The virial theorem for the polarizable continuum model (9 pages)
R. Cammi ................................................................................. 084112

Vibrational quasi-degenerate perturbation theory with optimized coordinates: Applications to ethylene and trans-1,3-butadiene (13 pages)
Kiyoshi Yagi and Hiroki Otaki .................................................. 084113

Monte Carlo configuration interaction with perturbation corrections for dissociation energies of first row diatomic molecules: C₂, N₂, O₂, CO, and NO (10 pages)
Thomas P. Kelly, Ajith Perera, Rodney J. Bartlett, and James C. Greer .................................................. 084114

Gradient of molecular Hartree–Fock–Bogoliubov energy with a linear combination of atomic orbital quasiparticle wave functions (7 pages)
Masato Kobayashi ........................................................................ 084115

Multiple time step integrators in ab initio molecular dynamics (8 pages)
Nathan Luehr, Thomas E. Markland, and Todd J. Martinez ................. 084116

Advanced Experimental Techniques

Hyperspectral imaging with in-line interferometric femtosecond stimulated Raman scattering spectroscopy (6 pages)
Sven Dobner and Carsten Fallnich ............................................. 084201

How to measure a complete set of polarization-dependent differential cross sections in a scattering experiment with aligned reagents? (9 pages)
Fengyan Wang, Jui-San Lin, and Kopin Liu .................................... 084202

Observing and preventing rubidium runaway in a direct-infusion xenon-spin hyperpolarizer optimized for high-resolution hyper-CEST (chemical exchange saturation transfer using hyperpolarized nuclei) NMR (9 pages)
C. Witte, M. Kunth, F. Rossella, and L. Schröder ......................... 084203

Observation of separate cation and anion electrophoretic mobilities in pure ionic liquids (10 pages)
Zhiyang Zhang and Louis A. Madsen ......................................... 084204

Diffusion-assisted selective dynamical recoupling: A new approach to measure background gradients in magnetic resonance (8 pages)
Gonzalo A. Álvarez, Noam Shemesh, and Lucio Frydman ................ 084205

Atoms, Molecules, and Clusters

Effect of chemical substitutions on photo-switching properties of 3-hydroxy-picolinic acid studied by ab initio methods (14 pages)
Michał F. Rode and Andrzej L. Sobolewski .................................. 084301

Spin-symmetry conversion in methyl rotors induced by tunnel resonance at low temperature (8 pages)
B. Zhang, C. Sun, A. M. Alsanooosi, A. Albout, and A. J. Horsewill .................................................. 084302

Probing the electronic structure and Au–C chemical bonding in AuC₂⁻ and AuC₂ using high-resolution photoelectron spectroscopy (13 pages)
Iker León, Zheng Yang, and Lai-Sheng Wang ............................... 084303

Comparison of the interactions in the rare gas hydride and Group 2 metal hydride anions (12 pages)
Joe P. Harris, Daniel R. Manship, W. H. Breckenridge, and Timothy G. Wright .................................................. 084304

(Continued)
Quantum optimal control pathways of ozone isomerization dynamics subject to competing dissociation: A two-state one-dimensional model (11 pages)
Yuzuru Kuroasaki, Tak-San Ho, and Herschel Rabitz ................................................. 084305

Quantum theory of atoms in molecules/charge-charge flux-dipole flux models for fundamental vibrational intensity changes on H-bond formation of water and hydrogen fluoride (10 pages)

Effects of reactant rotation on the dynamics of the OH + CH₄ → H₂O + CH₃ reaction: A six-dimensional study (7 pages)
 Hongwei Song, Jun Li, Bin Jiang, Minghui Yang, Yunpeng Lu, and Hua Guo ................................................................. 084307

CO₂ isolated line shapes by classical molecular dynamics simulations: Influence of the intermolecular potential and comparison with new measurements (6 pages)
 G. Larcher, H. Tran, M. Schwell, P. Chelin, X. Landsheere, J.-M. Hartmann, and S.-M. Hu ................................................................. 084308

Theoretical study on the gas phase reaction of allyl chloride with hydroxyl radical (11 pages)
 Yunjiu Zhang, Kai Chao, Jingyu Sun, Wanjiao Zhang, Haijie Shi, Cen Yao, Zhongmin Su, Xiumei Pan, Jingping Zhang, and Rongshun Wang ................................................................. 084309

Line interference effects using a refined Robert-Bonamy formalism: The test case of the isotropic Raman spectra of autoperturbed N₂ (8 pages)
 Christian Boulet, Qiancheng Ma, and Franck Thibault ................................................................. 084310

Theoretical study of photodetachment processes of anionic boron cluster. III. B⁷⁻ (17 pages)
 S. Rajagopala Reddy and S. Mahapatra ................................................................. 084311

Effect of laser spectral bandwidth on coherent control of resonance-enhanced multiphoton-ionization photoelectron spectroscopy (5 pages)
 Shuwu Xu, Jingxin Ding, Chenhui Lu, Tianqing Jia, Shian Zhang, and Zhenrong Sun ................................................................. 084312

Hydrogen migration dynamics in hydrated Al clusters: The Al₁₇⁺⁻H₂O system as an example (10 pages)
 S. Álvarez-Barcia and J. R. Flores ................................................................. 084313

First-principles insights into interaction of CO, NO, and HCN with Ag₈ (7 pages)
 Zahra Torbatian, S. Javad Hashemifar, and Hadi Akbarzadeh ................................................................. 084314

Accurate determination of the binding energy of the formic acid dimer: The importance of geometry relaxation (8 pages)
 Robert Kalescky, Elfi Krak, and Dieter Cremer ................................................................. 084315

Rovibrational energy transfer in the He-C₃ collision: Potential energy surface and bound states (7 pages)
 Otoniel Denis-Alpizar, Thierry Stoecklin, and Philippe Halvick ................................................................. 084316

Liquids, Glasses, and Crystals

Reactive cluster model of metallic glasses (10 pages)
 Travis E. Jones, Jonathan Morelli, and Mark E. Eberhart ................................................................. 084501

The random phase approximation applied to ice (10 pages)
 M. Macher, J. Kišmeš, C. Franchini, and G. Kresse ................................................................. 084502

Mass effect on the Soret coefficient in n-alkane mixtures (6 pages)
 David Alonso de Mezquita, M. Mounir Bou-Ali, J. Antonio Madariaga, and Carlos Santamaría ................................................................. 084503

Computer simulation of epitaxial nucleation of a crystal on a crystalline surface (11 pages)
 J. P. Mithen and R. P. Sear ................................................................. 084504

(Continued)
Investigating vibrational anharmonic couplings in cyanide-bridged transition metal mixed valence complexes using two-dimensional infrared spectroscopy (10 pages)
Karla M. Slenkamp, Michael S. Lynch, Benjamin E. Van Kuiken, Jennifer F. Brookes, Caitlin C. Bannan, Stephanie L. Daifuku, and Munira Khalil .................................................. 084505

Cross-nucleation between clathrate hydrate polymorphs: Assessing the role of stability, growth rate, and structure matching (10 pages)
Andrew H. Nguyen and Valeria Molinero .................................................. 084506

Surfaces, Interfaces, and Materials

Exploring size and state dynamics in CdSe quantum dots using two-dimensional electronic spectroscopy (11 pages)
Justin R. Caram, Halbin Zheng, Peter D. Dahlberg, Brian S. Rolczynski, Graham B. Griffin, Dmitriy S. Dolzhnikov, Dmitri V. Talapin, and Gregory S. Engel .................................................. 084701

The effect of the exchange-correlation functional on H₂ dissociation on Ru(0001) (17 pages)
M. Wijzenbroek and G. J. Kroes .................................................. 084702

Two charged states of hydrogen on the SrTiO₃(001) surface (6 pages)
Kotaro Takeyasu, Keisuke Fukada, Shohei Ogura, Masuaki Matsumoto, and Katsuyuki Fukutani .................................................. 084703

Insight into the description of van der Waals forces for benzene adsorption on transition metal (111) surfaces (10 pages)
Javier Carrasco, Wei Liu, Angelos Michaelides, and Alexandre Tkatchenko .................................................. 084704

Adsorption of CO₂, N₂, and CH₄ in Cs-exchanged chabazite: A combination of van der Waals density functional theory calculations and experiment study (10 pages)
Jin Shang, Gang Li, Ranjeeet Singh, Penny Xiao, David Danaci, Jefferson Z. Liu, and Paul A. Webley .................................................. 084705

Yttrium-dispersed C₅₀ fullerenes as high-capacity hydrogen storage medium (6 pages)
Zi-Ya Tian and Shun-Le Dong .................................................. 084706

Ion transport in sub-5-nm graphene nanopores (7 pages)
Myung E. Suk and N. R. Aluru .................................................. 084707

Polymers and Soft Matter

Modeling the construction of polymeric adsorbent media: Effects of counter-ions on ligand immobilization and pore structure (9 pages)
Enrico Riccardi, Jee-Ching Wang, and Athanasios I. Liapis .................................................. 084901

Dynamics of polymers: A mean-field theory (7 pages)
Glenn H. Fredrickson and Henri Orland .................................................. 084902

Impacts of side chain and excess energy on the charge photogeneration dynamics of low-bandgap copolymer-fullerene blends (13 pages)
Ming-Ming Huo, Rong Hu, Ya-Dong Xing, Yu-Chen Liu, Xi-Cheng Ai, Jian-Ping Zhang, and Jian-Hui Hou .................................................. 084903

Screening properties of four mesoscale smoothed charge models, with application to dissipative particle dynamics (6 pages)
Patrick B. Warren and Andrey Vlasov .................................................. 084904

Interplay between chain stiffness and excluded volume of semiflexible polymers confined in nanochannels (12 pages)
Abhiram Muralidhar, Douglas R. Tree, Yanwei Wang, and Kevin D. Dorfman .................................................. 084905

(Continued)
Twofold reentrant melting in a double-Gaussian fluid (8 pages)
    Santi Prestipino, Cristina Speranza, Gianpietro Malescio, and Paolo V. Giaquinta
                          084906

Biological Molecules and Networks

Activation and deactivation of vibronic channels in intact phycocyanin rods (10 pages)
                          085101

Development of morphogen gradient: The role of dimension and discreteness (14 pages)
    Hamid Teimouri and Anatoly B. Kolomeisky
                          085102

Ab initio investigation of the first hydration shell of protonated glycine (10 pages)
    Zhichao Wei, Dong Chen, Huiling Zhao, Yinli Li, Jichun Zhu, and Bo Liu
                          085103
