The 7th International Workshop on Modeling in Crystal Growth

Numerical simulation of impurity transport under the effect of a gas flow guidance device during the growth of multicrystalline silicon ingots by the directional solidification process Y.-Y. Teng, J.-C. Chen, B.-S. Huang and C.-H. Chang	1
Heat transfer in an industrial directional solidification furnace with multi-heaters for silicon ingots Z. Li, L. Liu, X. Liu, Y. Zhang and J. Xiong	9
Two-dimensional numerical modeling of grain structure in multi-crystalline silicon ingot A. Nadri, Y. Duterrail-Couvat and T. Duffar	16
The influence of crucible and crystal rotation on the sapphire single crystal growth interface shape in a resistance heated Czochralski system M.-J. Hur, X.-F. Han, D.-S. Song, T.-H. Kim, N.-J. Lee, Y.-J. Jeong and K.-W. Yi	22
System design and hot zone optimization of monocrystalline silicon directional solidification furnace for PV application X. Ma, L. Zheng and H. Zhang	28
Improvement of the thermal design in the SiC PVT growth process J.-Y. Yan, Q.-S. Chen, Y.-N. Jiang and H. Zhang	34
Potential for growth of Si-Ge bulk crystals by modified FZ technique M.A. Gonik	38
Adaptive phase field modeling of morphological instability and facet formation during directional solidification of SiGe alloys H.K. Lin, H.Y. Chen and C.W. Lan	44
3D numerical investigation and improvement to the design of the thermal field before seeding in a multi-die edge-defined film-fed growth system for sapphire ribbon crystals Q. Yu, L. Liu, A. Geng, B. Jiang, Z. Li, Y. Xu and K. Xue	49
Thermal and stress distributions in larger sapphire crystals during the cooling process in a Kyropoulos furnace C.-H. Chen, J.-C. Chen, Y.-S. Chiue, C.-H. Chang, C.-M. Liu and C.-Y. Chen	55
The relative contributions of thermo-solutal Marangoni convections on flow patterns in a liquid bridge H. Minakuchi, Y. Takagi, Y. Okano, S. Gima and S. Dost	61
Numerical simulation of InGaSb crystal growth by temperature gradient method under normal- and micro-gravity fields M. Nobeoka, Y. Takagi, Y. Okano, Y. Hayakawa and S. Dost	66
Combined effect of crucible rotation and magnetic field on hydrothermal wave Y. Takagi, Y. Okano, H. Minakuchi and S. Dost	72
The influence of vibrations on melt flows during detached Bridgman crystal growth T.P. Lyubimova, D.V. Lyubimov and A.O. Ivantsov	77
Numerical investigation of heat and mass transfer during vertical Bridgman crystal growth under rotational vibrations T.P. Lyubimova and Ya.N. Parshakova	82

Modeling of axial vibrational control technique for CdTe VGF crystal growth under controlled cadmium partial pressure I. Avetissov, V. Kostikov, V. Meshkov, E. Sukhanova, M. Grishechkin, S. Belov and A. Sadovskiy	88
Study of the effect of doped impurities on polytype stability during PVT growth of SiC using 2D nucleation theory T. Shiramomo, B. Gao, F. Mercier, S. Nishizawa, S. Nakano and K. Kakimoto	95
Combined 3D and 2.5D modeling of the floating zone process with Comsol Multiphysics M. Wünscher, R. Menzel, H. Riemann and A. Lüdge	100
Quasi-two-dimensional equilibrium solid/liquid interface of colloids at low osmotic pressure Z. Wang, J. Wang, L. Wang, J. Li and Y. Zhou	106
Lattice-matching of Si grown on 6H-SiC(000-1) C-face L.B. Li, Z.M. Chen, L.F. Xie and C. Yang	111
The effect of anisotropic surface tension on the interface evolution of a particle in the undercooled melt M. Chen, Z. Wang and J.-J. Xu	115
Phase field modeling with large interface thickness and undercooling C.C. Chen, H.K. Lin and C.W. Lan	121
Solidification of multicrystalline silicon—simulation of micro-structures W. Miller, A. Popescu and G. Cantù	127
Phase field modeling of facet formation during directional solidification of silicon film H.K. Lin, H.Y. Chen and C.W. Lan	134
Phase-field simulations and geometrical characterization of cellular solidification fronts Y. Ma and M. Plapp	140
Free energy of the bcc-liquid interface and the Wulff shape as predicted by the phase-field crystal model F. Podmaniczky, G.I. Tóth, T. Pusztai and L. Gránásy	148
