On the cover: Jejunum of *T. spiralis*-infected BALB/c mice with granulated submucosal mast cells expressing mouse mast cell protease (mMCP)-5. Mucosal mast cells are also granulated but instead express mMCP-1, and another unique mast cell subset recruited to the draining lymph nodes remains hypogranular but makes cytokines. Liu, A. Y., D. F. Dwyer, T. G. Jones, L. G. Bankova, S. Shen, H. R. Katz, K. F. Austen, and M. F. Gurish. 2013. Mast cells recruited to mesenteric lymph nodes during helminth infection remain hypogranular and produce IL-4 and IL-6. *J. Immunol.* 190: 1758–1766.
