*Aravind T. Reddy, Sowmya P. Lakshmi, Sireesh Dornadula, Sudheer Pinni, Dileep R. Rampa, and Raju C. Reddy*

On the cover: An electron micrograph (6000 $\times$ ) capturing the interaction of an HIV-1-specific CTL (*center*) with a dendritic cell (DC) expressing cross-reactive HIV-1 variant Ag. The bidirectional activation of both cell types results in dramatic morphological changes in the DC, highlighted by the appearance of interconnected web-like extensions. Selective induction of CTL helper rather than killer activity by natural epitope variants promotes dendritic cell-mediated HIV-1 dissemination. *J. Immunol.* 191: 2570–2580.
