On the cover: Coronal section of a tooth and periodontal tissue from a mouse lacking MFG-E8, a novel homeostatic regulator of osteoclasts. MFG-E8-deficient mice exhibit enhanced osteoclastogenesis and bone loss in periodontitis (note nearly total loss of bone support) compared with wild-type controls. Specimen stained with tartrate-resistant acid phosphatase, hematoxylin, orange-G, and aniline blue. Abe, T., J. Shin, K. Hosur, M. C. Udey, T. Chavakis, and G. Hajishengallis. 2014. Regulation of osteoclast homeostasis and inflammatory bone loss by MFG-E8. *J. Immunol.* 193: 1383–1391.
