On the cover: Possible tryptophan conformers of the mutated MelanA/Mart1 peptide (ELA_{I5W}), modeled in the ternary complex between TCR Mel5, MHC molecule HLA-A2, and wild-type peptide. The steric clashes suggest that activation of Mart1-specific T cells by the mutated peptide is allowed after structural adaptation of CDRs to fit the larger residue. Reiser, J.-B., F. Legoux, S. Gras, E. Trudel, A. Chouquet, A. Léger, M. Le Gorrec, P. Machillot, M. Bonneville, X. Saulquin, and D. Housset. 2014. Analysis of relationships between peptide/MHC structural features and naive T cell frequency in humans. *J. Immunol.* 193: 5816–5826.
