## ARTICLES

- |         |                                                                                                                                         |                                                                                                                                                              |
|---------|-----------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 175–181 | <b>Lightweight and stiff cellular ceramic structures by ice templating</b>                                                              | Florian Bouville, Eric Maire,<br>Sylvain Deville                                                                                                             |
| 182–189 | <b>Improving Bi<sub>2</sub>Te<sub>3</sub>-based thermoelectric nanowire microstructure via thermal processing</b>                       | Michael P. Siegal,<br>Steven J. Limmer,<br>Jessica L. Lensch-Falk,<br>Kristopher J. Erickson,<br>Douglas L. Medlin,<br>W. Graham Yelton,<br>Caitlin Rochford |
| 190–196 | <b>Effect of the pH and electrodeposition frequency on magnetic properties of binary Co<sub>1-x</sub>Sn<sub>x</sub> nanowire arrays</b> | Mojgan Najafi, Amir Abbas Rafati,<br>Mona Khorshidi Fart, Atefeh Zare                                                                                        |
| 197–206 | <b>Effect of crystallographic texture, anisotropic elasticity, and thermal expansion on whisker formation in β-Sn thin films</b>        | Wei-Hsun Chen, Pylin Sarabol,<br>John R. Holaday,<br>Carol A. Handwerker,<br>John E. Blendell                                                                |
| 207–214 | <b>Formation of 2D transition metal dichalcogenides on TiC<sub>1-x</sub>A<sub>x</sub> surfaces (A = S, Se, Te): A theoretical study</b> | Krisztina Kádas, Jill Sundberg,<br>Ulf Jansson, Olle Eriksson                                                                                                |
| 215–220 | <b>Hydrogen storage properties of mono- and bidentate MOF structured orotate complexes</b>                                              | Zeynel Ozturk, Dursun Ali Kose,<br>Abdurrahman Asan, Banu Ozturk,<br>Omer Andac, Goksel Ozkan                                                                |
| 221–229 | <b>Synthesis and optical absorption properties of Au–Ag nanoparticle bimetal dispersed SiO<sub>2</sub> composite films</b>              | Yan Li, Bo-Ping Zhang, Cui-Hua Zhao, Liang Zou, Jin-Xian Zhao                                                                                                |
| 230–238 | <b>Synthesis and characterization of Nb, F-codoped titania nanoparticles for dye-sensitized solar cells</b>                             | Mingqi Gao, Youlong Xu,<br>Yang Bai, Shaohua Jin                                                                                                             |
| 239–246 | <b>UV photo-chlorination and -bromination of single-walled carbon nanotubes</b>                                                         | Luciana Oliveira, Fei Lu,<br>Lisa Andrews, Gerald A. Takacs,<br>Michael Mehan, Thomas Debies                                                                 |
| 247–251 | <b>A method for gelcasting high-strength alumina ceramics with low shrinkage</b>                                                        | Yi Sun, Shunzo Shimai,<br>Xiang Peng, Manjiang Dong,<br>Hidehiro Kamiya, Shiwei Wang                                                                         |
| 252–259 | <b>The peculiarities of reduction of iron (III) oxides deposited on expanded graphite</b>                                               | Marat Lutfullin, Olga Shornikova,<br>Alexander Dunaev,<br>Dmitry Filimonov, Alina Schur,<br>Makhsud Saidaminov,<br>Natalya Sorokina, Viktor Avdeev           |
| 260–266 | <b>Fabrication and characterization of aluminum matrix fly ash cenosphere composites using different stir casting routes</b>            | Yufu Sun, Yezhe Lyu,<br>Airong Jiang, Jingyu Zhao                                                                                                            |
| 267–276 | <b>Bulge fatigue testing of freestanding and supported gold films</b>                                                                   | Benoit Merle, Mathias Göken                                                                                                                                  |
| 277–287 | <b>An energy analysis of nanovoid nucleation in nanocrystalline materials with grain boundary sliding accommodations</b>                | Lu Wang, Jianqiu Zhou,<br>Shu Zhang, Yingguang Liu,<br>Hongxi Liu, Ying Wang,<br>Shuhong Dong                                                                |
| 288–293 | <b>Effect of microwave processes on the energy-storage properties of barium strontium titanate glass ceramics</b>                       | Jinwen Wang, Linjiang Tang,<br>Bo Shen, Jiwei Zhai                                                                                                           |

(Continued)

**CORRIGENDUM**

- 294      **Effect of electric current direction on recrystallization rate and texture of a Cu–Zn alloy– CORRIGENDUM**

Xinli Wang, Wenbin Dai,  
Chongwei Ma, Xiang Zhao

**ERRATUM**

- 295      **Complex oxide nanomembranes for energy conversion and storage: A review– ERRATUM**

Kian Kerman,  
Shriram Ramanathan
