ON THE COVER: Illustrated is the selective monofunctionalization of a calix[6]arene through an intramolecular thermal Huisgen reaction with a guest accommodated into the cavity. This supramolecular approach can be used as a general tool for the selective functionalization of molecular receptors. The background image is the bay of St. John's (Newfoundland and Labrador) where the 12th International Conference on Calixarenes (Calix 2013) was held. See Jabin and co-workers, p 1913.
