**Library of Molecular Nanoparticle Modules
From "Nano-Atoms" to Giant Molecules**

Shape- and volume-persistent molecular nano-
modules with precisely-defined surface functionalities
unique elements for macromolecular science

*"What would the properties of
materials be if we could really
arrange the atoms the way we
want them?"*

—Richard Feynman

ON THE COVER: Molecular nanoparticles are unique elements for macromolecular science. From the library of molecular nanoparticles, giant molecules of precise primary structures can be designed and synthesized in a modular fashion. They are able to further assemble into diverse hierarchical structures. What would the properties of this class of materials be? See page 1221.
