Franky So

Thermodynamics at the nanoscale: A new approach to the investigation of unique physicochemical properties of nanomaterials

Chun Cheng Yang*, Yiu-Wing Mai

Centre for Advanced Materials Technology (CAMT), School of Aerospace, Mechanical and Mechatronic Engineering J07, The University of Sydney, Sydney, NSW 2006, Australia

Contents

1. Introduction	4
1.1. Scope	4
1.2. Overview	4
1.3. Challenges	5
1.4. Objectives	5
2. Principles: atomic vibrational instability	5
2.1. Lindemann's melting criterion	5
2.2. Size-dependent melting thermodynamics of crystals	6
3. Interatomic potential and cohesive energy	7
3.1. Interatomic potential at the nanoscale	7
3.2. Current nanothermodynamics models of cohesive energy	7
3.3. A new model: size, dimensionality and composition dependency	7
3.4. Consistency among different nanothermodynamics models	8
3.5. Validity of new model	8
4. Thermal stability	8
4.1. Cohesive energy E_c	8

The publisher encourages the submission of articles in electronic form thus saving time and avoiding rekeying errors. A leaflet describing our requirements is available from the publisher upon request

4.1.1. E_c of nanocrystals	8
4.1.2. E_c of binary nanoalloys	9
4.2. Solid–liquid transition temperature T_m	10
4.2.1. T_m of isolated nanocrystals	10
4.2.2. T_m of nanosized solid solution and eutectic binary alloys	10
4.2.3. T_m of nanoparticles embedded in matrices	11
4.3. Solid–vapor transition temperature	13
4.4. Debye temperature	13
4.5. Einstein temperature	14
4.6. Melting enthalpy	14
4.7. Size–temperature–composition phase diagrams	15
4.8. Size–temperature–pressure phase diagrams	15
4.8.1. Pentacene thin films	15
4.8.2. Silver nanocrystals	17
4.8.3. Carbon nanoparticles	18
5. Magnetic properties	20
5.1. Curie temperature	20
5.2. Order–disorder transition temperature	20
6. Photoelectric behaviors	21
6.1. Bandgap energy	21
6.2. Raman red shift	26
6.3. Molar extinction coefficient	29
7. Thermoelectric phenomena	30
7.1. Thermal conductivity and diffusivity of nanocrystals	30
7.2. Thermal conductivity of nanoporous and nanostructured bulk materials	31
8. Mechanical properties	33
8.1. Young's modulus	33
8.2. Inverse Hall–Petch relationship	33
9. Electrical properties	33
9.1. Electrical conductivity	33
9.2. Relative permittivity	34
10. Other physicochemical properties	34
10.1. Volume thermal expansion coefficient	34
10.2. Mass density	34
10.3. Catalytic activation energy	34
10.4. Diffusion activation energy	34
10.5. Vacancy formation energy	35
11. Future work	35
