Franky So

Guiding Editor:
Philippe Dubois

Materials engineering for surface-confined flame retardancy

Giulio Malucelli, Federico Carosio, Jenny Alongi,
Alberto Fina, Alberto Frache, Giovanni Camino

Materials engineering for surface-confined flame retardancy

Giulio Malucelli, Federico Carosio, Jenny Alongi, Alberto Fina, Alberto Frache, Giovanni Camino*

Department of Applied Science and Technology and INSTM Local Unit, Politecnico di Torino, Alessandria Campus, Viale Teresa Michel 5, 15121 Alessandria, Italy

Contents

1. Introduction	2
2. Intumescent coatings	2
3. Layer by layer assemblies	6
3.1. Deposition methods	6
3.2. Layer by layer architectures	7
3.2.1. Inorganic barrier coatings on fabrics.....	8
3.2.2. Coatings with intumescent composition deposited on fabrics	8
3.2.3. Hybrid coatings on fabrics	10
3.2.4. Other substrates: Foams and thin films	10
4. Sol-gel treatments	11
4.1. Sol-gel chemistry	11
4.2. Sol-gel derived coatings	12

The publisher encourages the submission of articles in electronic form thus saving time and avoiding rekeying errors. A leaflet describing our requirements is available from the publisher upon request

4.3. Flame retardant sol–gel treatments on textile substrates	13
4.3.1. Inorganic structures	13
4.3.2. Phosphorus-doped silica structures	16
4.3.3. Smoke suppressant coatings	17
4.3.4. Interpenetrated hybrid organic–inorganic network structures derived from sol–gel processes performed within a polymer matrix	18
4.4. Other substrates	18
5. Conclusions	18
