

Volume 140 · Number 1 · August 2013

Mathematical Programming SERIES B

A Publication of the Mathematical Optimization Society

Convex Analysis, Optimization and Applications

Edited by Antonio Frangioni · Michael L. Overton ·
Claudia Sagastizábal

Springer

Special Issue: Convex Analysis, Optimization and Applications

Guest Editors: Antonio Frangioni · Michael L. Overton · Claudia Sagastizábal

PREFACE

Preface

A. Frangioni · M.L. Overton · C. Sagastizábal 1

FULL LENGTH PAPERS

Semi-algebraic functions have small subdifferentials

D. Drusvyatskiy · A.S. Lewis 5

Testing copositivity with the help of difference-of-convex optimization

M. Dür · J.-B. Hiriart-Urruty 31

A stabilized structured Dantzig–Wolfe decomposition method

A. Frangioni · B. Gendron 45

Semidefinite relaxations of ordering problems

P. Hungerländer · F. Rendl 77

On the bridge between combinatorial optimization and nonlinear optimization: a family of semidefinite bounds for 0–1 quadratic problems leading to quasi-Newton methods

J. Malick · F. Roupin 99

Gradient methods for minimizing composite functions

Yu. Nesterov 125

The proximal Chebychev center cutting plane algorithm for convex additive functions

A. Ouorou 163

Composite proximal bundle method

C. Sagastizábal 189

Instructions for Authors can be found on the journal's website www.springer.com/10107

Comprehensively covered by
ACM Computing Reviews,
Mathematical Reviews and
Zentrblatt MATH

Springer
