

COVER IMAGE

Light propagating through a scattering medium exhibits correlations in the transmission matrix. A theoretical and experimental study uncovers intensity correlations that survive multiple scattering, which could be exploited for imaging.

Article p684; News & Views p622

3D simulations of magnetic reconnection suggest the existence of secondary reconnection sites that could be observed by the new NASA Magnetospheric MultiScale mission.

Article p690

Bilayer graphene isn't defect-free: the abundance of partial dislocations leads to a mosaic-like network structure. As a result, the magnetoresistance of bilayer graphene depends linearly, rather than quadratically, on the external magnetic field.
