

# ORGANOMETALLICS

**ON THE COVER:** The cover page depicts the conceptual merging of sterically demanding P,N and carbene ligands to afford a new hybrid P<sub>2</sub>carbene ligand that enables, for the first time, the Buchwald–Hartwig amination of aryl chlorides with both primary and secondary amines at room temperature using a single ligand. See the paper by Stradiotto and co-workers on pages 6148–6161.
