Structure and Properties of Condensed Matter

Philosophical Magazine

Contents

	Page
Issue 1	
Part A: Materials Science	
Computational modelling of submicron-sized metallic glasses <i>S. Bargmann, T. Xiao and B. Klusemann</i>	1
First-principles study of point defects in Ni ₃ Al <i>A.V. Ruban, V.A. Popov, V.K. Portnoi and V.I. Bogdanov</i>	20
On the relationships between hardness and the elastic and plastic properties of isotropic power-law hardening materials <i>H. Lan and T.A. Venkatesh</i>	35
Origin of tweed in Au–Cu–Al alloys <i>J. Liu, Z. Liu and X. Jin</i>	56
Temperature derivatives of the bulk modulus of ZrB ₂ calculated by using the pressure derivative of the bulk modulus <i>H. Özkan</i>	73
Upward migration of sodium chloride by crystallization on non-porous surfaces <i>R. Hird and M.D. Bolton</i>	78
Evaluating the effects of loading parameters on single-crystal slip in tantalum using molecular mechanics <i>C. Alleman, S. Ghosh, D.J. Luscher and C.A. Bronkhorst</i>	92
Issue 2	
Part A: Materials Science	
Symmetry of the charge-ordered phases in Pr _{0.5} Ca _{0.5} MnO ₃ <i>P.R. Sagdeo and N.P. Lalla</i>	117
On the influence of isotropic and kinematic hardening caused by strain gradients on the deformation behaviour of polycrystals <i>A. Ma and A. Hartmaier</i>	125
Thermoluminescence characteristics of Tl ₄ GaIn ₃ S ₈ layered single crystals <i>S. Delice, M. Isik and N.M. Gasanly</i>	141
Non-planar grain boundary structures in fcc metals and their role in nano-scale deformation mechanisms <i>L. Smith and D. Farkas</i>	152
Role of Ag addition in L1 ₀ ordering of FePt-based nanocomposite magnets <i>A.D. Crisan, F. Vasiliu, I. Mercioniu and O. Crisan</i>	174
Part B: Condensed Matter Physics	
Square wells, quantum wells and ultra-thin metallic films <i>V. Barsan</i>	190
A normal coordinate analysis of AMoO ₄ crystals (A = Sr, Ba and Pb) <i>R. Jindal, H.C. Gupta and M.M. Sinha</i>	208

(Full contents list begins on page i)

Part B: Condensed Matter Physics

Square wells, quantum wells and ultra-thin metallic films

V. Barsan 190

A normal coordinate analysis of AMoO_4 crystals (A = Sr, Ba and Pb)

R. Jindal, H.C. Gupta and M.M. Sinha 208

Issue 3

Part A: Materials Science

A model for the initiation of reaction sites during the uranium–hydrogen reaction assuming enhanced hydrogen transport through thin areas of surface oxide

J. Glascott 221

High cycle fatigue and fracture behaviour of a hot isostatically pressed nickel-based superalloy

C. Qiu and X. Wu 242

Ab initio investigation of tensile strengths of metal(1 1 1)/ α - Al_2O_3 (0 0 0 1) interfaces

S. Hocker, S. Schmauder, A. Bakulin and S. Kulkova 265

Interaction mechanisms of screw dislocations with $\{10\bar{1}1\}$ and $\{10\bar{1}2\}$ twin boundaries in Mg

M. Yuasa, K. Masunaga, M. Mabuchi and Y. Chino 285

Direct observation of Cu interphase precipitation in continuous cooling transformation by atom probe tomography

Q. Liu, C. Li, J. Gu and W. Liu 306

Plastic deformation and fatigue properties of CoZr single crystals at room and high temperatures

F. Mahzoon, A. Behgozin and K. Janghorban 316

Studies of some physical properties of $\text{PrFe}_{0.7}\text{Ni}_{0.3}\text{O}_3$ thin films after 200 MeV Ag^{15+} irradiation

F.A. Mir 331
