Full Multipartite Entanglement of Frequency-Comb Gaussian States

S. Gerke, J. Sperling, W. Vogel, Y. Cai, J. Roslund, N. Treps, and C. Fabre

Researchers characterize the multiple ways of entanglement that exist between different frequency bands in a down-converted frequency comb.

Glow in the Dark Matter: Observing Galactic Halos with Scattered Light

Jonathan H. Davis and Joseph Silk

The dark matter around galaxies might produce a detectable glow at infrared wavelengths.

Storage and Retrieval of THz-Bandwidth Single Photons Using a Room-Temperature Diamond Quantum Memory

Duncan G. England, Kent A. G. Fisher, Jean-Philippe W. MacLean, Philip J. Bustard, Rune Lausten, Kevin J. Resch, and Benjamin J. Sussman

Diamond crystals enable new ways of storing single photons at room temperature and detecting their entanglement.

Entangled Absorption of a Single Photon with a Single Spin in Diamond

Hideo Kosaka and Naeko Niikura

Diamond crystals enable new ways of storing single photons at room temperature and detecting their entanglement.

Strange Nonchaotic Stars
The ratio of the frequencies of a pulsating star is approximately the golden mean, a clue that the pulsing is fractal in time.
