Physics and Chemistry of Minerals

Volume 40, Issue 5, May 2013

ISSN: 0342-1791 (Print) 1432-2021 (Online)

In this issue (7 articles)

1. Original Paper

How stacking disorder can conceal the actual structure of micas: the case of phengites

Alessandro Pavese, Valeria Diella Pages 375-386

2. Original Paper

High-pressure X-ray study of LiCrSi₂O₆ clinopyroxene and the general compressibility trends for Li-clinopyroxenes

Benedetta Periotto, Ross J. Angel, Fabrizio Nestola... Pages 387-399

3. Original Paper

Thermo-elastic behaviour of Be₂BO₃OH (hambergite) up to 7 GPa and 1,100 K

G. Diego Gatta, Paolo Lotti, Fabrizio Nestola... Pages 401-409

4. Original Paper

Comprehensive physicochemical study of dioctahedral palygorskite-rich clay from Marrakech High Atlas (Morocco)

Benaissa Rhouta, Ezzouhra Zatile, Lahcen Bouna... Pages 411-424

5. Original Paper

Shock-induced formation mechanism of seifertite in shergottites

Ulrich W. Bläß Pages 425-437

6. Original Paper

Structure analysis on synthetic emerald crystals

Pei-Lun Lee, Jiann-Shing Lee, Eugene Huang... Pages 439-446

7. Original Paper

Stability and equation of state of post-aragonite BaCO₃

Joshua P. Townsend, Yun-Yuan Chang, Xiaoting Lou... Pages 447-453
