Hypoxia and Adipose Tissue Function and Dysfunction in Obesity

Paul Trayhurn

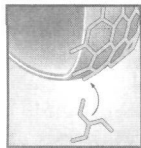

1

Satellite Cells and the Muscle Stem Cell Niche

Hang Yin, Feodor Price, and Michael A. Rudnicki

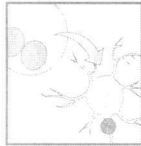

23

Role of Phospholipids in Endocytosis, Phagocytosis, and Macropinocytosis

Michal Bohdanowicz and Sergio Grinstein

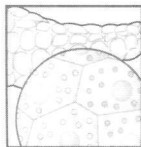

69

Metabolism and the Circadian Clock Converge

Kristin Eckel-Mahan and Paolo Sassone-Corsi

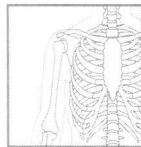

107

Mechanisms of Diabetic Complications

Josephine M. Forbes and Mark E. Cooper

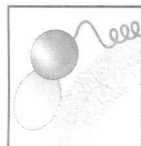

137

Gastric Acid, Calcium Absorption, and Their Impact on Bone Health

Sascha Kopic and John P. Geibel

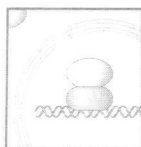

189

Regulation of Small GTPases by GEFs, GAPs, and GDIs

Jacqueline Cherfils and Mahel Zeghouf

269

Proteins and Small Molecules for Cellular Regenerative Medicine

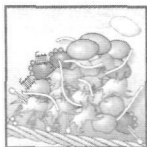

Eric M. Green and Richard T. Lee

311

(Continued)

Cover: A contracted thrombus is formed after platelets adhere to a von Willebrand factor/collagen matrix, become activated, secrete granular contents, aggregate via integrins, and support thrombin generation to produce fibrin. See Henri H. Versteeg, Johan W. M. Heemskerk, Marcel Levi, and Pieter H. Reitsma. *Physiol Rev* 93: 327–358, 2013.
