When we are unable to find what we need in nature, we make it. Our manufacturing special report, "How to Make the Next Big Thing," examines new materials, methods and technologies shaping the future of fabrication. Humans and robots will increasingly work together as peers—giving or taking orders based on ability—in a bid to improve efficiency. Illustration by Justin Metz.

FEATURES

SPECIAL REPORT: THE FUTURE OF MANUFACTURING

How to Make the Next Big Thing

- 22 **Introduction**
By Ricardo Hausmann
- 24 **My Boss the Robot**
By David Bourne
- 28 **Future Stuff** *By Steven Ashley*
- 30 **To Print the Impossible**
By Larry Greenemeier
- 34 **Rise of the Nano Machines**
By Mihail C. Roco
- 36 **Assembled in Code**
By James D. Myers

NEUROSCIENCE

38 **Seeds of Dementia**

A chain reaction of toxic proteins may help explain Alzheimer's, Parkinson's and other killers—an insight that could lead to new treatment options. *By Lary C. Walker and Mathias Jucker*

PLANETARY SCIENCE

44 **Mars in Motion**

The surface of the Red Planet changes all the time. Is flowing water one of the causes? *By Alfred S. McEwen*

EVOLUTION

52 **Human Hybrids**

DNA analyses find that early *Homo sapiens* mated with other human species and hint that doing so played a key role in the triumph of our kind. *By Michael F. Hammer*

EMERGING DISEASES

58 **How Kitty Is Killing the Dolphins**

Ocean mammals are dying from an unexpected source: pathogens spread to them from cats, humans and other land animals. *By Christopher Solomon*

BIOCHEMISTRY

64 **Mirror Molecules**

Mirror images of key biological molecules turn out to play unexpected roles in human health. *By Sarah Everts*

Obama's Second-Term Appointments

As President Barack Obama fills posts for the Department of Energy, the Environmental Protection Agency and other key agencies, we examine what the next four years hold for U.S. science policy.
