### [3+2] Cycloadditions of $\alpha$ -acyl ketene dithioacetals with propargylamines: pyrrole synthesis in water

Pages 1478-1481

Chuan-Qing Ren, Chong-Hui Di, Yu-Long Zhao, Jing-Ping Zhang

#### Graphical abstract

A series of 2,3,4-trisubstituted and 1,2,3,4-tetrasubstituted pyrroles were synthesized via [3+2] cycloaddition of  $\alpha$ -acyl ketene dithioacetals (or related substrates) with commercially available propargylamines as 1,3-dipoles in water. Most of the reactions can be performed in the absence of an external base. The reaction of secondary amine (*N*-methylprop-2-yn-1-amine) with  $\alpha$ -acyl ketene dithioacetals showed different reaction behaviours depending on the addition or absence of an external base.
